PROFESSOR [Name]

# RAJAJEE (DEGREE) MAHAVIDYALAYA, BHISMAGIRI (GANJAM)

## Syllabus

Sl. No.	Topic	Lectures	Tutorials	Practicals	Total
1	Introduction to the course	1	1	1	3
2	Unit I: Fundamentals of Chemistry	10	10	10	30
3	Unit II: Organic Chemistry	10	10	10	30
4	Unit III: Inorganic Chemistry	10	10	10	30
5	Unit IV: Physical Chemistry	10	10	10	30
6	Unit V: Environmental Chemistry	10	10	10	30
7	Unit VI: Analytical Chemistry	10	10	10	30
8	Unit VII: Applied Chemistry	10	10	10	30
9	Unit VIII: Biochemistry	10	10	10	30
10	Unit IX: Polymer Chemistry	10	10	10	30
11	Unit X: Nanotechnology	10	10	10	30
12	Unit XI: Materials Chemistry	10	10	10	30
13	Unit XII: Surface Chemistry	10	10	10	30
14	Unit XIII: Coordination Chemistry	10	10	10	30
15	Unit XIV: Solid State Chemistry	10	10	10	30
16	Unit XV: Electrochemistry	10	10	10	30
17	Unit XVI: Radiation Chemistry	10	10	10	30
18	Unit XVII: Environmental Chemistry	10	10	10	30
19	Unit XVIII: Analytical Chemistry	10	10	10	30
20	Unit XIX: Applied Chemistry	10	10	10	30
21	Unit XX: Biochemistry	10	10	10	30
22	Unit XXI: Polymer Chemistry	10	10	10	30
23	Unit XXII: Nanotechnology	10	10	10	30
24	Unit XXIII: Materials Chemistry	10	10	10	30
25	Unit XXIV: Surface Chemistry	10	10	10	30
26	Unit XXV: Coordination Chemistry	10	10	10	30
27	Unit XXVI: Solid State Chemistry	10	10	10	30
28	Unit XXVII: Electrochemistry	10	10	10	30
29	Unit XXVIII: Radiation Chemistry	10	10	10	30
30	Unit XXIX: Environmental Chemistry	10	10	10	30
31	Unit XXX: Analytical Chemistry	10	10	10	30
32	Unit XXXI: Applied Chemistry	10	10	10	30
33	Unit XXXII: Biochemistry	10	10	10	30
34	Unit XXXIII: Polymer Chemistry	10	10	10	30
35	Unit XXXIV: Nanotechnology	10	10	10	30
36	Unit XXXV: Materials Chemistry	10	10	10	30
37	Unit XXXVI: Surface Chemistry	10	10	10	30
38	Unit XXXVII: Coordination Chemistry	10	10	10	30
39	Unit XXXVIII: Solid State Chemistry	10	10	10	30
40	Unit XXXIX: Electrochemistry	10	10	10	30
41	Unit XL: Radiation Chemistry	10	10	10	30
42	Unit XLI: Environmental Chemistry	10	10	10	30
43	Unit XLII: Analytical Chemistry	10	10	10	30
44	Unit XLIII: Applied Chemistry	10	10	10	30
45	Unit XLIV: Biochemistry	10	10	10	30
46	Unit XLV: Polymer Chemistry	10	10	10	30
47	Unit XLVI: Nanotechnology	10	10	10	30
48	Unit XLVII: Materials Chemistry	10	10	10	30
49	Unit XLVIII: Surface Chemistry	10	10	10	30
50	Unit XLIX: Coordination Chemistry	10	10	10	30
51	Unit L: Solid State Chemistry	10	10	10	30
52	Unit LVI: Electrochemistry	10	10	10	30
53	Unit LVII: Radiation Chemistry	10	10	10	30
54	Unit LVIII: Environmental Chemistry	10	10	10	30
55	Unit LVIX: Analytical Chemistry	10	10	10	30
56	Unit LX: Applied Chemistry	10	10	10	30

English

Write a paragraph on the following topic:

My dream is to become a doctor. I want to help people and make a difference in the world. I will study hard and work for my goals.

-higher order derivative

on and ehelon forms

in for differentiability

ge , partial derivative, higher order partial derivative

orm of arithmetcs

asis

मार्ग - कर्म (Dharma) महत्त्वपूर्ण  
 धर्म - आचार्यजी द्वारा  
 उपदेश - प्रत्येक व्यक्ति  
 सब - समान  
 + 10-15 ग्राम तक

प्रश्न

(1) What is Radical Theory?

व्यक्तिगत रूप से व्यक्ति के जीवन में अनुभवों के अनुसार कार्य।  
 व्यक्ति एवं समाज दोनों में समानता एवं समानता प्रदान की  
 जायेगी। समाज में अन्तर्भावना + समाज में समानता एवं समानता  
 प्राप्त करे। समाज में समानता - समाज में समानता प्रदान की  
 जायेगी। समाज में समानता - समाज में समानता प्रदान की जायेगी।  
 समाज में समानता - समाज में समानता प्रदान की जायेगी।  
 समाज में समानता - समाज में समानता प्रदान की जायेगी।

Q. 1. 2 Marks

1. What is Vedic culture?

वेदों की संस्कृति का क्या अर्थ है?

2. What is Brahmanic culture?

ब्रह्मणिक संस्कृति का क्या अर्थ है?

2 Marks

3. What do you mean by Upanishads?

उपनिषदों का क्या अर्थ है?

4. What is Kalidasa?

कालिदास का क्या अर्थ है?

5. What do you mean by the term 'Upanishads'?

उपनिषदों का क्या अर्थ है?

Q. 2. 1 Mark

1. Explain the term 'Upanishads'.

उपनिषदों की अवधारणा समझाएं।

Answer

1. Upanishads are the philosophical part of the Vedas. They deal with the nature of the soul, the universe, and the path to liberation.

उपनिषदों वेदों का दार्शनिक भाग हैं। वे आत्मा, ब्रह्म, और मोक्ष के रास्ते के बारे में बात करते हैं।

2. Upanishads are the philosophical part of the Vedas.

उपनिषदों वेदों का दार्शनिक भाग हैं।

Upanishads are the philosophical part of the Vedas.

1. Renewable energy is energy that is naturally replenished on a human timescale. It includes solar, wind, hydro, geothermal, and biomass.

2. Non-renewable energy is energy that is not naturally replenished on a human timescale. It includes fossil fuels (coal, oil, natural gas), nuclear, and wind power.

3. Renewable energy is energy that is naturally replenished on a human timescale.

4. Renewable energy is energy that is naturally replenished on a human timescale.

5. Renewable energy is energy that is naturally replenished on a human timescale.

6. Renewable energy is energy that is naturally replenished on a human timescale.

- 2) statistical economic variables  
 statistical economic variables
- 3) National statistics are prepared from the data that are used to support the and test people's views
- 4) Any national statistic that improves its use to consider - national issues of the country. National govt. issues - some and some are national concerns
- 5) National statistics are used to make the production of goods

## RELIABILITY

### Reliability

- Reliability and variety of data collected the higher the more reliable the data
- It is the most important and important feature of all plans
- The aim of reliability was reached in 1955
- It is important to maintain the reliability of national statistics
- It deals with statistic's variety and reliability

Biodiversity includes the number of different organisms and their relative frequencies in an ecosystem.

Types of biodiversity

There are 3 types of diversity in biodiversity.

- ① Genetic diversity
- ② species diversity
- ③ Ecological biodiversity

① Genetic diversity

→ It refers to the variations among the genetic material of an organism.  
→ Every individual of a particular species differs from each other in their genetic composition.

② Species diversity

→ Species diversity refers to the variety of different types of species found in particular area.  
→ It is the biodiversity of the mass.  
→ Mass diversity  
→ For example, human show lot of diversity among themselves.

## Ecological Sustainability

An ecosystem is a collection of living and non-living organisms and their interaction with each other.

Ecological sustainability is the maintenance of the structure and function of an ecosystem together and connected by food chains and food webs.

## Importance of Sustainability

Sustainability and its components are very important for sustainability life on earth.

A few of the reasons explaining the importance of sustainability.

### Ecological Sustainability

Every species has a specific role in an ecosystem. They capture and store energy and use it to produce and decompose organic matter.

### Economic Importance

Sustainability is a measure of resources for the production of food, health products and pharmaceuticals.

Some of the reasons for the importance of sustainability are the fact that it is a key to the development of a sustainable society. It is a key to the development of a sustainable society. It is a key to the development of a sustainable society.

NAME - RAUNIGANI

Roll No - 2120220004

Sub - Biology DSE-11

Subject -

Q. Full form of DNA

Ans: - Polynucleotide (or) Nucleic acid

Q. What instrument used to measure separation

Ans: Thin Chromatography

Q. Spectro photometer

Ans: A Spectrophotometer is an instrument that measures the amount of light absorbed by a sample.

Spectrophotometer techniques are mostly used to measure the concentration of solute in solution by measuring the amount of the light that is absorbed by the solution in a cuvette placed in the Spectrophotometer.

Q. TLC

Ans: - Thin layer Chromatography is a Chromatography technique used to separate non volatile mixtures.

Thin layer Chromatography is performed on a sheet of or rigid substrate such as glass, plastic or aluminium foil.

... which is coated with a thin layer of  
adsorbent material, usually Silica gel. Also  
called as column.

## 3. Chromatography :

It :-

In chemical analysis, Chromatography is  
laboratory technique for the separation of  
mixture into its components.

→ The mixture is dissolved in fluid  
called the mobile phase which carries it  
through a system in which a substance  
called the stationary phase is fixed. In  
the different column, phase is fixed  
→ Because the different components of the  
mixture tend to have different affinities  
for the stationary phase, and are retained  
for different lengths of time depending  
on their interaction with the stationary phase, causing  
them to separate.

→ The Separation is based on the diff.  
partitioning between the mobile and the  
stationary phases.

→ Slight differences in component's  
partition coefficient result in different  
retention on the stationary phase and  
thus affect the separation.

## History of Chromatography

- Chromatography was first devised in Russia by the Russian-born Scientist Mikhail Tsvet in 1900.

- He developed the technique and termed the term Chromatography in the field to use of the color changing property for the separation of the pigments such as chlorophylls, carotenoids and xanthophylls.

- These three components separate to bands of different colors (green, orange and yellow) when they slowly pass over the base of the column.

- New types of Chromatography developed during the 1950s and 1960s over the technique adopted for many separation processes.

- Chromatography techniques developed independently as a result of the work done by G. B. Porter, Paul H. Plesch, Lawrence H. Tungsten, George Dornig, etc. in 1940s and 1950s for which they were awarded the Nobel prize for Chemistry.

## Chromatography - types

- Analytical Chromatography - The technique to be described during Chromatography is the normally used as a means for the analysis.

- Qualitative Chromatography - The use of knowledge to determine the substance and estimate the concentration of sample in sample.

Chromatography - a laboratory process which  
consistently separates the liquid mixture  
into the various parts of the mixture as  
- Chromatography - The usual name of  
Chromatography. In the case of a liquid  
mixture different dyes or pigments  
Chromatography separates in different colors  
the various dyes.

### Principles of Chromatography

The basic principle of Chromatography is  
to separate a mixture with a slight affinity for the  
Chromatography surface. This is effectively done  
by the fact that the various components will  
travel at different rates.

There are several differences between  
Chromatography and other Chromatography

In chromatography, substances separate  
from a column - usually between two  
successive of plates, typically to facilitate  
analysis for various purposes.

The fact is that any difference of  
solubility from the column will be more  
easily seen.

But for the different differences in  
solubility between the components  
Chromatography separates.

Example 2 (Open) mass-spring  
Steady-state response

- Mass-spring system with  $m=1$
- Force -  $\sin(\omega t)$
- Case -  $\omega=1$  (resonance)
- Ass -  $\zeta=0$  (undamped)
- Goal -

- 1. Find the steady-state response  $x(t)$
- 2. The response is unbounded (resonance)
- 3. The response is  $x(t) = \frac{1}{2} t \sin(t)$
- 4. The response is unbounded (resonance)

- 5. The response is unbounded (resonance)
- 6. The response is unbounded (resonance)
- 7. The response is unbounded (resonance)

Problem

- 1. A mass-spring system with  $m=1$
- 2. The response is unbounded (resonance)
- 3. The response is unbounded (resonance)
- 4. The response is unbounded (resonance)
- 5. The response is unbounded (resonance)

Conclusion

- 1. The response is unbounded (resonance)
- 2. The response is unbounded (resonance)
- 3. The response is unbounded (resonance)
- 4. The response is unbounded (resonance)
- 5. The response is unbounded (resonance)

Biological Classification of Kingdoms  
The Kingdoms are classified in various but generally 5 or 6  
to describe.

- 1) They are all based on different criteria like form of nucleus, presence and mode of reproduction.
- 2) They include all the organisms which are of multicellular and also some of the unicellular organisms.
- 3) They include organisms with different modes of life and different relationships in the environment with respect to nutrition and oxygen.
- 4) They are all based on the different criteria like presence of nucleus.
- 5) They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 6) They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 7) They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 8) They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.

Kingdoms  
1) Monera: Kingdom of single celled organisms, mostly prokaryotes. Includes bacteria and blue-green algae. They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.

- 2) Protista: Kingdom of unicellular eukaryotes. Includes amoeba, paramecium, etc. They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 3) Fungi: Kingdom of multicellular eukaryotes. Includes mushrooms, yeasts, etc. They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 4) Plantae: Kingdom of multicellular eukaryotes. Includes trees, flowers, etc. They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.
- 5) Animalia: Kingdom of multicellular eukaryotes. Includes insects, mammals, etc. They are all based on the different criteria like presence of nucleus, mode of life, mode of nutrition, etc.

# Phagocytosis

Phagocytosis is a process by which a cell engulfs a large particle or microorganism. It is a form of endocytosis. The cell membrane of the phagocyte extends and surrounds the particle, forming a vesicle called a phagosome. The phagosome then fuses with a lysosome, forming a phagolysosome where the particle is degraded.

Phagocytosis is a type of endocytosis. It involves the engulfing of large particles or microorganisms by a cell. The cell membrane of the phagocyte extends and surrounds the particle, forming a vesicle called a phagosome. The phagosome then fuses with a lysosome, forming a phagolysosome where the particle is degraded.

Pinocytosis is a type of endocytosis. It involves the engulfing of small particles or molecules by a cell. The cell membrane of the phagocyte forms small, deep invaginations that pinch off to form small vesicles (pinocytosomes) inside the cell.

A plant cell is shown during ~~mitosis~~ ~~meiosis~~ ~~prophase~~ ~~metaphase~~ ~~anaphase~~ ~~telophase~~ ~~cytokinesis~~ ~~prophase I~~ ~~metaphase I~~ ~~anaphase I~~ ~~telophase I~~ ~~cytokinesis I~~ ~~prophase II~~ ~~metaphase II~~ ~~anaphase II~~ ~~telophase II~~ ~~cytokinesis II~~

The primary function of the cell is to produce energy for the cell. The cell is also responsible for the production of proteins and other molecules.

This is a diagram of a cell showing the organelles and their functions. The cell is shown in a cross-section, and the organelles are labeled with their names and functions.

The diagram shows a cell with several organelles labeled. The labels include:

## Cultivation

- Good irrigation especially dry climate, water table provides source of water particularly hardy crops in high altitude and control in matter of moisture.
- In the other parts of India particularly in the parts being to have particularly in winter, summer - depending upon crop - conditions.
- Soil is generally light soil for good proper soil moisture content necessary for germination of the seed.
- Wheat is cultivated during "rain" season in India, where the quantity of rainfall is low.
- High nutrients are required for good cultivation and tillage, fertilizers, pesticides and weedicides.

## Use of wheat

- 1. Wheat flour is suitable for bread making.
  - 2. Used for making flat bread, roti, muffins, cookies etc.
  - 3. Used for preparation of various beverages.
  - 4. Flour is suitable for animal feed and it makes nice good fodder grain.
  - 5. Wheat straw is also used for making of poultry mix used in the manufacture of silica, cement, Densite etc.
- Examples - (1) Bajra, Jowar  
(2) Chickpea, Soybean

## Conductance

Q. The conductance of a material is the ratio of the current through it to the potential difference across it.

Conductance is the reciprocal of resistance. It is denoted by  $G$ .

## Types

Conductance is of two types - ohmic and non-ohmic.

Ohmic conductance is that in which the resistance is constant and does not depend on the potential difference across it.

Non-ohmic conductance is that in which the resistance varies with the potential difference across it.

Ohmic conductance is of two types - linear and non-linear.

## Factors

1. The conductance of a material depends on its length, area of cross-section and resistivity. It is given by the formula  $G = \frac{A}{lR}$ .

2. The conductance of a material is directly proportional to the area of cross-section and inversely proportional to the length of the material.

## Spleen

organs in a body including heart

it is composed of 4 cells and connective

- Q7. The price of a commodity is directly proportional to the quantity demanded.
- Q8. The price of a commodity is directly proportional to the square of the quantity demanded.
- Q9. The price of a commodity is directly proportional to the quantity demanded.
- Q10. The price of a commodity is directly proportional to the square of the quantity demanded.

Normally a mass of the heterozygotes will produce a 1:1 ratio.

At a heterozygote, the two heterozygotes are expected to produce a 2:1 ratio.

### Genotype frequencies

Differences in genotype are changes in the structure or number of chromosomes, which are changes in individual genotype.

Changes typically for 23 pairs of chromosomes, or with 23 pairs of autosomes, last pair is chromosomes are 23 chromosomes which include or include an individual with a change - any of the chromosomes, it results in variation, which is chromosomal structural and may cause cellular function.

Differences in structure or the number of chromosomes are structural chromosomal.

There is a lot of types of structural chromosomal alterations and deletion, duplication, inversion, translocation.

Deletion may also a portion of the chromosome is deleted which may affect the chromosome's function.

In duplication, part of the chromosome is duplicated, resulting in extra genetic material. This may be caused by non-reciprocal exchange.

the number of a chromosome changes when the genetic material is involved. Chromosomes are normally paired chromosomes.

6) Translocation occurs when a piece of one chromosome has broken off from its original location and attached to another chromosome.

7) Robertsonian translocations are one potential cause of Down's syndrome.

### Down's chromosomal syndrome

1) Chromosomal disorders are that normally are result of aneuploidy and are most often inherited.

2) Down's is the presence of an extra chromosome 21 in the case of Down syndrome.

3) The extra has most common chromosomal disorders are Down's syndrome which results in physical symptoms and learning difficulties such as mental retardation.

4) Symptoms of Down's syndrome are the same, but they usually present with different symptoms than chromosomal disorders.

5) Turner syndrome is the only sex chromosome anomaly which occurs when a person inherits only one X chromosome and is usually assigned female sex.

## Reduce the risk of environmental deterioration

- 1) parents may reduce some risk of environmental deterioration in children by meeting their own nutritional needs, limiting exposure to pesticides, substances and visiting clean before becoming pregnant.
- 2) If a nutritional disorder has been identified in a family, a healthcare provider may recommend genetic counseling to discuss alternative options, including assisted reproductive techniques.

Cont. 12  
Christy Kumbhar  
Oshali, Kumbhar, Maharashtra  
Kot 174

Q. Analyze Christy

1. a. What is chemical shift? write the factors affecting chemical shift?  
b. Define NMR.

2. What is shielding and deshielding of protons?

Ans:

Chemical Shift:

The shift in the position of NMR absorption which arise due to shielding or deshielding of protons by the  $e^-$  are called chemical shift.

For measuring chemical shift of various, we use a tetramethyl silane (TMS) is taken as reference.

Due to low ESI value of Si, the shielding of equivalent protons in TMS is greater than

others.

- TMS is taken as reference because of its following characters:-

(1) It is miscible in all organic solvent.

(2) It is highly volatile, thus can be easily removed from the system.

(3) It doesn't take part in intermolecular association with the sample.

A chemical shift is also defined as the difference in ppm bet<sup>n</sup> the reference frequency of the reference protons and that of the TMS hydrogen.

$$\text{Chemical shift } (\delta) = \frac{\text{Frequency of signal} - \text{Frequency of reference}}{\text{Spectrometer Frequency}} \times 10^6$$

$$= \frac{\text{Frequency signal} - \text{Frequency of reference}}{\text{Spectrometer Frequency}} \times 10^6$$

As  $\delta$  increases

Factors affecting chemical shift

The chemical shift of a molecule is affected by the following factors.

a) Inductive effect

A proton is said to be deshielded if it is attached to a electronegative group. As electronegativity increases the  $\delta$  value increases and more will be  $\delta$  value (2 ppm).

b) Hydrogen Bonding

It is found that a hydrogen atom exhibiting property of H-bonding in a compound exhibits at a low field  $\delta$  compared to the one which does not. The H-bonded proton being attached to a highly EN atom will have smaller  $\delta$  density around it being less shielded the field felt by such a proton will be more and hence the resonance will occur down field.

## b. NMR:

Nuclear magnetic resonance spectroscopy is a technique which is based on the absorption of electromagnetic radiation.

In the radio frequency region of spectrum by the nuclei of atoms, there are 2 common type of NMR spectroscopy used to characterize organic etc.

### 1) $^1\text{H-NMR}$

It is used to determine the type and no. of H atoms in molecule.

### 2) $^{13}\text{C-NMR}$

It is used to determine the type of carbon in a molecule.

### Theory of NMR:

Spin quantum no. ( $I$ ) is related to the atomic and mass no. of the nucleus as follows.

$I$	Atomic mass	- Atomic no.	Example
all integer	odd	odd	$^{11}\text{B}$ $^{13}\text{C}$
	odd	even	
	even	odd	
	even	even	

to be zero

Core-11

12  
15

1) Write the postulates of MOT.

16/12/22

2) ~~Draw~~ See side the diagram between Bond and Antibond

2. a. Draw the molecular orbital diagram of  $O_2$ .

Answer

1. Molecular Orbital Theory -

This theory was given by Hund and Mulliken in 1932, to explain the molecular structures. The main postulates of this theory are:

- i) The wavefunction of an electron in a molecule is called its molecular orbital.
- ii) The molecular orbital is formed by the linear combination of atomic orbitals of comparable energies.
- iii) The number of molecular orbitals formed is equal to the number of atomic orbitals contained.
- iv) The atomic orbitals combined to form molecular orbitals one of these has lower energy and is called bonding molecular orbitals which is more stable. And the other has higher energy which is called antibonding molecular orbitals and is less stable.

(\*) A molecular orbital (MO) as well as AO can

accommodate maximum of two electrons with opposite spins which is in accordance with Pauli's exclusion principle.

ii) The molecular orbitals ( $\psi_0$ ) as well as  $\psi_0$  can accommodate maximum of two electrons with opposite spins.

iii) The molecular orbitals are filled with electrons in order of their increasing energies which is accordance with Aufbau's principle.

iv) The shape of molecular orbitals depends upon the shape of  $\psi_0$ .

v) Electron pairing in degenerate MO takes place until each orbital is half-filled, which is in accordance with Hund's rule.

vi) The wave function of the molecular orbital  $\psi_0$  given by the relation,

$$\psi_0 = c_1\psi_1 + c_2\psi_2$$

where

$c_1$  &  $c_2$  are coefficients.

vii) The sequence of filling molecular orbitals for homonuclear molecules of elements with atomic number 1 to 7 is

$$1s \uparrow \downarrow \quad 2s \uparrow \downarrow \quad 2p_x \uparrow \downarrow \quad 2p_y \uparrow \downarrow \quad 2p_z \uparrow \downarrow = 2s 2p_x \uparrow \downarrow$$

$$2s 2p_x \uparrow \downarrow \quad 2s 2p_y \uparrow \downarrow \quad 2s 2p_z \uparrow \downarrow$$

8 to 10,

$$3s \uparrow \downarrow \quad 3p_x \uparrow \downarrow \quad 3p_y \uparrow \downarrow \quad 3p_z \uparrow \downarrow \quad 3s 3p_x \uparrow \downarrow$$

$$+ 3s 3p_y \uparrow \downarrow \quad 3s 3p_z \uparrow \downarrow = 3s 3p_x \uparrow \downarrow$$

# Difference Between EMS and Alloys:

b.

## EMS

1) It is formed by the addition of atoms of A.

$$A_2 + B_2 \rightarrow 2AB$$

2) It has more electronegativity in the region between the two metals, which leads to the stability of the bond.

3) It possess the energy level of atomic orbitals from which it is formed.

4) Nodes are not present.

5) These are designated as  $\sigma$ ,  $\pi$ ,  $\delta$  etc.

## Alloys

1) It is formed by the substitution of atoms of A.

$$A_2 + B_2 \rightarrow 2AB$$

2) It has less electronegativity in the region between the two metals, which leads to the instability of the bond.

3) It possess higher energy than the atomic orbitals from which it is formed.

4) Nodes are present.

5) These are designated as  $\sigma$ ,  $\pi$ ,  $\delta$  etc.

DSE-1

Chemistry Honours

Chemical Physics Semester

Roll No

43 Pradyumn Kumar

1. a. Determine the molecular mass of polymer by osmotic pressure method.

b. Determine the molecular mass of polymer by viscometry method.

2. Define Number Average molecular weight ( $M_n$ )?

Ans: a) Osmotic pressure method -

The osmotic pressure of solution of mass molecules even at low concentration, are significant and can be easily measured. Hence osmotic pressure of macromolecular solution can be used to determine the molecular weight of such substance.

According to van't Hoff equation,

$$pV = nRT$$

$$pV = \left(\frac{W}{M}\right)RT$$

$$p = \left(\frac{W}{V}\right) \frac{RT}{M}$$

$$p = cRT/M$$

$$\frac{p}{c} = \frac{RT}{M} \quad \text{--- (1)}$$

where  $p$  = Osmotic pressure of macromolecular solution.

$C$  =  $C_{01}$  of solution

$P_c$  = reduced osmotic pressure

$m$  = molecular weight of macromolecule

$R$  = gas constant

Equation (1) holds good only at infinite dilution  
Therefore eqn (1) becomes,

$$\left(\frac{P_c}{C}\right)_{C \rightarrow 0} = \frac{RT}{m} \quad (2)$$

where  $\left(\frac{P_c}{C}\right)_{C \rightarrow 0}$  denoting as reduced osmotic pressure

The osmotic pressure of dilute solution of polymer is measured at decreasing concentration.

If a graph is plotted between  $P/C$  and  $C$ , a straight line is obtained.

When this line is extrapolated to  $C=0$ , the intercept on  $P/C$  axis, gives the value of  $\left(\frac{P_c}{C}\right)_{C \rightarrow 0}$ . On substituting this value in eqn (2), the molecular weight of polymer is calculated.

Since osmotic pressure is colligative property i.e. depends on the no. of molecules, the value of molecular weight obtained by osmotic pressure method will be the number average molecular weight  $M_n$ .

b) The viscometry method introduced by H. Landolt which is one of the most commonly used method in day-to-day developed. This is due to the fact that experimental procedure including this method are very simple and accurate, and required a simple apparatus. However, this is not an absolute method.

To find the molecular weight using viscosity data, it is necessary to use empirical equations which give viscosity as a function of the molecular weight. Viscosities of polymer solutions are usually higher than those of pure solvent.

Let the relative viscosity =  $\eta_r$   
 viscosity of polymer solution =  $\eta$   
 viscosity of pure solvent =  $\eta_0$

① So,  $\eta_r = \frac{\eta}{\eta_0}$

The viscosity of solvent and solution are directly proportional to time.

Let the flow time of solvent =  $t_0$   
 flow time of solution =  $t$

② Relative viscosity,  $\eta_r = \frac{t}{t_0}$

③ Specific Viscosity ( $\eta_{sp}$ ) of the polymer solution  $\frac{\eta_{sp}}{\eta_0} = 1 + \frac{\eta - \eta_0}{\eta_0}$

where  $\eta_r$  is the relative viscosity.

The relative viscosity ( $\eta_r$ ) is related to specific viscosity ( $\eta_{sp}$ ) by the following equation -

$\eta_r - 1 = \eta_{sp}$  or  $\eta_r = 1 + \eta_{sp}$

① Reduced viscosity ( $\eta_{sp}/c$ ) is the ratio of specific viscosity

( $\eta_{sp}$ ) to the concentration of the solution  
in concentration.

② Inherent viscosity:

The inherent viscosity is the ratio of logarithm of relative viscosity ( $\eta_r$ ) to the concentration of the solution.

$$\text{Inherent viscosity} = \frac{\ln \eta_r}{c}$$

if the polymer solution is very dilute, then

$$\frac{\ln \eta_r}{c} = \frac{\ln (1 + \eta_{sp})}{c} = \frac{\eta_{sp}}{c} \left[ 1 + \frac{1}{2} k_2 c + \frac{1}{3} k_3 c^2 \right]$$

and therefore,  $\lim_{c \rightarrow 0} \frac{\ln \eta_r}{c} = \lim_{c \rightarrow 0} \frac{\eta_{sp}}{c} = [\eta]$

where  $[\eta]$  is called, intrinsic viscosity and its unit is  $\text{dl/g}$  (decilitre/gram)

The intrinsic viscosity is related to molecular weight of polymer according to following equation,

$$[\eta] = k M^a$$

where  $k, a = \text{constants}$

$M = \text{molecular weight}$

## 2. Weighted Average Molecular weight ( $M_w$ )

In this method, the molecular weight of each molecule and species is multiplied by its contribution to the total molecules and all the products so obtained are added to get the weight-average molecular weight.

The contribution of  $i$ -mer to the total molecular weight =  $\frac{N_i M_i}{\sum N_i M_i}$

of

So, the contribution of all species to the molecular weight =

$$\frac{N_1 M_1}{\sum N_i M_i} + \frac{N_2 M_2}{\sum N_i M_i} + \frac{N_3 M_3}{\sum N_i M_i} + \dots + \frac{N_i M_i}{\sum N_i M_i}$$

Multiplying the molecular weight of each individual species to its contribution to the total molecular weight, one can obtain

$$\bar{M}_w = \frac{N_1 M_1^2}{\sum N_i M_i} + \frac{N_2 M_2^2}{\sum N_i M_i} + \frac{N_3 M_3^2}{\sum N_i M_i} + \dots + \frac{N_i M_i^2}{\sum N_i M_i}$$

$$\bar{M}_w = \frac{N_1 M_1^2 + N_2 M_2^2 + N_3 M_3^2 + \dots + N_i M_i^2}{\sum N_i M_i}$$

$$\bar{M}_w = \frac{\sum_{i=1}^n N_i M_i^2}{\sum_{i=1}^n N_i M_i}$$

3

→ The weight average molecular weight depends on the weight of the polymer in a given volume of the solution.

→ The molecular weight of the polymer determined by light scattering, sedimentation equilibrium and viscosity measurement is known as the weight-average molecular weight.

Chemistry homework

Q. No. - 2

Chemical Homework (Mechanism)

Roll No.

43. Study given

Ans

12  
15

1. Explain about the nucleophilic substituted reactions in water?
2. What is catalysis? Give a comparative statement between homogeneous and heterogeneous catalysts used for green chemistry with suitable example?
3. Write the preparation of methyl acrylate (MMA) by conventional method as well as green synthesis!

Ans: 1)

1) Hofmann elimination - In this process the quaternary ammonium salts are heated at high temperature and the yield of the product is low. But use of alternative base-catalysis has led to high yielding (about 97%) synthesis (Wang et al 1995). In this process water is used as solvent.

2) Hydrolysis of benzoyl chloride to benzoyl alcohol - If this reaction takes place in a microwave oven, then it gives fast and the reaction complete in 30 mins compared to 3 hrs.

in the normal synthesis.

1) oxidation reaction: Benzyl alcohol (70%)  
 Oxidation of toluene in microwave condition gives 40% yield in time where as under normal condition (using strong) takes 1-10 hours.

2) Esterification: In presence of organic solvent (conc. H<sub>2</sub>SO<sub>4</sub>) when benzoic acid is heated with propyl alcohol in microwave oven for 5min, propylbenzoate is formed.

b) ans - The chemical reactions which are carried out in the presence of catalyst are known as catalyzed reaction or catalysis. It is of two types.

1) homogeneous catalysis: The catalyzed reaction in which the catalyst and the reactions are in same phase are called homogeneous catalyst.

Example 1:

1.  $2\text{CO}_2(\text{g}) + \text{O}_2(\text{g}) \xrightarrow{\text{NO}_2(\text{g})} 2\text{CO}_2(\text{g})$
2.  $\text{C}_2\text{H}_5\text{COOC}_2\text{H}_5(\text{l}) + \text{H}_2\text{O}(\text{l}) \xrightarrow{\text{H}_2\text{SO}_4(\text{l})} \text{C}_2\text{H}_5\text{COOH}(\text{l}) + \text{C}_2\text{H}_5\text{OH}(\text{l})$
3.  $\text{C}_6\text{H}_{12}\text{O}_6(\text{l}) + \text{H}_2\text{O}(\text{l}) \xrightarrow{\text{H}_2\text{SO}_4(\text{l})} \text{C}_6\text{H}_{12}\text{O}_6(\text{l}) + \text{C}_6\text{H}_{12}\text{O}_6(\text{l})$   
 (Sucrose) (Glucose) (Fructose)

In example 1, reactants and catalyst are in gaseous state and in example 2 and 3, reactants and the catalysts are in liquid phase. So they all are in one phase and form homogeneous system.

(b) Heterogeneous catalysis: The catalyzed reactions in which the catalyst and the reactants are in different phase are known as heterogeneous catalysis.

Example 2:

1. Synthesis of ammonia by Haber's process using Fe-catalyst.

2. Preparation of nitric oxide from ammonia by Oswald's process using platinum catalyst.

4. Ziegler-Natta catalyzed reactions using Ziegler-Natta as catalyst.

Ziegler-Natta (Z-N) catalysts are of two types. First type (Z-N) from Ziegler, it is an aluminum alkyls reacts with ethylene.

Periodic Family of transition - Chemical

Formula of this catalyst is  $\text{PtCl}_2 \cdot 2\text{C}_6\text{H}_6$

$\text{PtCl}_2 \cdot 2\text{C}_6\text{H}_6$  (Olin catalyst) - It was patented

by, mason and company in 1975. It

is widely used in petroleum industries

as a homogeneous catalyst for hydrocarbon isomerization reaction.

Ex (ii) Isomerization of m-xylene to p-xylene

(i) Preparation of Ethylbenzene from benzene

(ii) Reaction of acetylene

$\text{Pt}/\text{Pd}$  - Sabatier  
Quinone, controlled

cis - but - 2 - ene

Advantage:

This process takes place at mild reaction condition, it is highly selective and associated with ease of heat transfer from a solution.

Disadvantage: The main disadvantage is the separation of product from catalyst and recycling of the catalyst. The products obtained by this method.

## 2. Conventional Method

The preparation of methyl acrylate (MA) by conventional method:

The methylacrylate is obtained by treating the MAc with methyl acrylate such as N,N-dimethyl acrylate or with pyridine or by separating it by using distillation techniques.

### Green Synthesis of MA:

Waldmann et al. - J. Chem. Soc. Chem. 1994, 732

MA can be prepared alternatively from  $\text{CO}_2$  by reacting with methyl amine under mild condition (min. 0-25°C) in presence of suitable base catalyst. Followed by dehydration with  $\text{P}_2\text{O}_5$ .

Thus, in the new technique, the use of toxic  $\text{COCl}_2$  gas is avoided.

Qa. Give brief discuss about Arrhenius theory of electrolytic dissociation? (6x1)

b. Write the theory of acid-base indicators?

c.

Write any one

3x1

13  
15

20) Find the pH value of 0.001 M of  $H_2SO_4$ ?

b) Explain common ion effect with example?

c) What is solubility product?

### Answer

a) Ac. is Arrhenius theory acid is a substance which give  $H^+$  ion after dissociation,  $HCl \rightarrow H^+ + Cl^-$

→ Base is a substance which give  $OH^-$  ion after dissociation.  $NaOH \rightarrow Na^+ + OH^-$

→ Salt is a substance which give  $OH^-$  ion after dissociation. Ex

→ Salt is a acid when acid and base react with each other to form salt + a neutral.

→ Ac. to Arrhenius theory the electrolytic dissociation of acid, base or salt is

dissolved in water. It means reformation due to the groups of  $OH^-$  having positive or negative charge.

→ positive charge is cation and negative charge is anion.

Ex - Ac. is a substance which dissociate in water to give  $H^+$  &  $Cl^-$

APPLYING LAW OF MASS ACTION

$$K_f = \frac{[A^+][B^-]}{[AB]}$$

Acid-base Indicator :-

An acid base indicator is defined as a substance which changes it's colour with variation in pH value of the solution to which it is added. The pH range differ considerably from one indicator to another.

Ostwald's theory :-

Acc to this theory, an acid-base indicator is a weak organic acid. The unionised and ionised part of the indicator show different colours in solution.

Let HIn ionise as

If the solution is acidic, increases in  $H^+$  ion concentration shifts the equilibrium towards left and hence HIn. On the other hand if the solution is alkaline the decrease in concentration of  $H^+$  ion shift the equilibrium towards right and the colour of the solution will be due to the ionised part  $In^-$ .

## Action of Phenolphthalein

It is colourless organic compound. It dissolves in water dissociates slightly to form  $H^+$  ions (colourless) and  $Ph^-$  ions (Pink).

If the solution is acidic by adding  $HCl$  in concentration of  $H^+$  ion shift the equilibrium towards left and the colour will be blue to  $HPh$  i.e. colourless. If the solution is alkaline by adding few drops of  $NaOH$ , the  $OH^-$  ions react with  $H^+$  ions to form  $H_2O$  and therefore the decrease in  $H^+$  ion concentration will shift the equilibrium towards right and the colour will be due to  $Ph^-$  ion i.e. Pink.

$$2H^+ = 10^{-3}$$

$$H^+ = 2 \times 10^{-3}$$

$$PH = -\log 2 \times 10^{-3}$$

$$PH = -[\log 2 + \log 10^{-3}]$$

$$= -[\log 2 - 3 \log 10]$$

$$= -[\log 2 + 3]$$

AK

- Q1) Explain the findings of Bohr's model? (20)
- Q2) State one major failure of Rutherford's model? (5)
- Q3) Write a note on Bohr's atomic equation? (20)

Answer

Q1) Bohr's atomic model

To explain Bohr's atomic model, Bohr's theory of atomic structure is based on the following postulates:

The main postulates of this theory are:

- i) An atom consists of a heavy positively charged particle called nucleus.
- ii) The electrons revolve around the nucleus in a definite circular path called orbits.
- iii) These orbits or shells have definite amount of energy but these are called energy levels.
- iv) These energy levels are fixed at  $1, 2, 3, 4, \dots$
- v) The electrons can revolve in the orbits of an atom only if they have definite energy.
- vi) When an electron absorbs energy, it jumps from lower energy level to higher energy level.
- vii) When it loses energy it jumps from higher energy level to lower energy level.
- viii) The energy difference between two energy levels is given by  $\Delta E = E_2 - E_1 = h\nu$ .

b) de Broglie's principle

According to this principle - The electrons are filled in various orbitals in the order of their increasing energies.

- An orbital with lowest energy will be filled first.
- In Aufbau the usual Aufbau means building of this principle states that the electrons are filled in various orbitals in order of their increasing energy.
- Aufbau gives the order of orbitals.

1) For subshell with lower  $(n+l)$  value will possess lower energy will be filled first.

eg:  $4p = 4+1 = 5$  filled first  $3d$

$$\begin{aligned} \text{For } 4p &= n+l = 4+1 = 5 \\ \text{For } 3d &= n+l = 3+2 = 5 \end{aligned}$$

2) Since  $(n+l)$  value for both the subshell are equal the one shell with lower value of  $n$  possess lower energy.

eg:  $3p$  subshell is filled first than  $4s$

$$\begin{aligned} \text{For } 3p &= n+l = 3+1 = 4 \\ \text{For } 4s &= n+l = 4+0 = 4 \end{aligned}$$

→ The value of  $n$  is less for  $3p$  it will be in shell as compared to  $4s$  subshell.

2.70 De Broglie's equation

1) The wave character of large objects (in motion) has not practical significance, if it is because their wavelength is too small to be observed. 2

2) The wave character of microscopic particles (in motion) has practical significance, if it is because their wave length is not easily observed.

$$\lambda = \frac{h}{mv}$$

13 2nd semester (chemistry)

 Cond - 5 (Iron ores)

1. a) prepare  $\text{Fe}_3\text{O}_4$  from  $\text{Fe}$  and explain its structure and hybridization

Preparation:  
Wüstite Tetrafluoride ( $\text{Fe}_3\text{O}_4$ ):

Preparation:  
 → When a mixture of  $\text{Fe}$  and  $\text{Fe}_2\text{O}_3$  (Crabtree 175) is heated in a mixture of  $\text{CO}$  and  $\text{CO}_2$  at  $400^\circ\text{C}$  about 1 atm pressure  $\text{Fe}_3\text{O}_4$  results.

→ When a mixture of  $\text{Fe}$  and  $\text{Fe}_2\text{O}_3$  is heated with steam (quantity say) at room temp or  $100^\circ\text{C}$  pure  $\text{Fe}_3\text{O}_4$  forms.

Properties:

→ It is blackish crystal solid having magnetic and soluble in  $\text{HCl}$  and  $\text{HF}$ .

→ It is used as an oxidizing agent.

→ It oxidizes  $\text{H}_2$  to  $\text{H}_2\text{O}$  at  $100^\circ\text{C}$ .

→ It oxidizes  $\text{H}_2$  to  $\text{H}_2\text{O}$ .

LOF Xe oxidized to Xe in  $\text{F}_2$

$\Rightarrow$  It is easily hydrolytic by  $\text{H}_2\text{O}$  to give  $\text{XeO}_2$

$\Rightarrow$  It is stronger fluorinating agent than  $\text{XeF}_2$ .

Structure:-

One  $5s$ , three  $5p$  and two  $5d$  orbitals of Xe atom intermix to give 6  $sp^3d^2$  hybrid orbitals in which 2  $sp^3d^2$  hybrid orbitals contain lone pair of e<sup>-</sup> while others are half filled. The half filled  $2p$  orbitals of F atoms overlaps with

$4s^2 3d^5$  All filled orbitals  
 + Cl atom  $4s^2 3d^5$  p-Symbol  
 half filled orbitals to form  
 Thus  $FeCl_2$  has square  
 planar geometry.

(k) What are clathrates?  
Clathrates:-

A clathrate is a chemical substance consisting of a lattice which contains molecules. The word clathrate which derive from the Latin word 'clathratus' which means 'in prison' lattice.

Sir Humphrey Davy in 1811 discovered the 1<sup>st</sup> clathrate known as "gas hydrate of chlorine".

According to many clathrate compound consist of about 10 molecules of one substance called the "Guest" trapped with in the cavities of crystal lattice of some organic and some inorganic compound called "Host".

The general formula of clathrate is " $hX \cdot gY$ ".

where,  $h$  = no. of host (H) molecules present in a unit lattice cell.

$g$  = no. of guest (G) molecules present in a single cage.

The force which keeps the guest and host together are weak van der Waals forces.

Condition to form clathrate:-

(i) Cubic lattice of appropriate size should be present in the crystal lattice of host or that of the guest.

(ii) The guest particles should not be highly volatile.

Stability of clathrate compounds:-

The clathrate compounds are stable due to the following reasons.

→ The guest atom (or) molecules with in the cavities possess low potential energy.

Types of alone:-

→ Hydrogen bonding in clathrates is stronger than that present in normal crystalline lattice of host alone.

Types of clathrates:-

Clathrates are of 4 types.

1) Gas hydrates

2) Gaseous clathrates

3) Radio active clathrates

4) Liquid clathrates

Uses:-

- It helps to separate hydrocarbons.
- Clarifies the physiological action.
- These are used to store noble gases.
- It helps to separate the gas a mixture of He, Ar, Kr and Xe.

(2) Write the uses of He.

Ans

Uses of Helium:-

- An oxygen helium mixture is used to treat asthma because it diffuses more rapidly through constricted lung passage.
- It is used as a cooling medium in atomic react<sup>n</sup> because of its inert nature.
- It is used in filling types of glo  
airplane.
- A mixture of He and H is used in bal  
loon air ships and weather observation balloons.
- An oxygen and He mixture is used by sc  
uba divers for respiration in deep sea water to avoid nitrogen narcosis and bends, due to embolism.

Chemistry notes

Name - Dominik Gaud

Roll no - 123456

Topic - C Carbonyl compound

1. Aldol reaction

2. Aldol condensation

3. Cannizzaro's reaction

4. Haloforn reaction

Q. Synthesis of  $\text{CH}_3\text{CHO}$  from  $\text{CH}_3\text{COOH}$  and  $\text{CH}_3\text{COCl}$

Ans

1. Aldol condensation

Two molecules of aldehydes (or ketones) having  $\alpha$ -hydrogen atom under condensation in presence of dilute alkali gives an aldol or  $\beta$ -hydroxy aldehyde etc. In case of ketone, it gives a number of condensation products depending upon the reaction conditions.

This reaction is called aldol condensation (or  $\beta$ -hydroxy condensation)

Reaction

## Mechanism

The mechanism of this reaction involves the following steps.

(i) Hydroxide ion abstracts a proton from the  $\alpha$ -carbon of the aldehyde to form a carbanion.

(ii) Cannizzaro's reaction:-

Aldehydes do not having  $\alpha$ -hydrogen then reacts with conc<sup>n</sup> NaOH to form sodium salt of fatty acid and an alcohol.

## Mechanism:-

The mechanism of this reaction involves the following steps.

(iii) Haloforn reaction :-

When aldehyde and ketone containing  $\alpha$ -H group on warming with halogen and aqueous NaOH form haloforn.

Mechanism :-

The mechanism of this reaction involves the following steps.

## Reimer-Tiemann reaction:

Aldehydes can be prepared by the reduction of acid chloride in presence of palladium catalyst (Pd-BaSO<sub>4</sub>)

Formaldehyde (CH<sub>2</sub>O) can not be prepared by this method because (HCOCl) is unstable at room temp.

## Mechanism:

This mechanism involves hydrogenation of acyl group followed by the elimination of HCl.

(b) ketones are obtained when acid chloride react with alkyl cadmium in presence of dry ether.

## From alcohol:

Aldehydes can be obtained by the direct oxidation of primary alcohols with oxidized  $\text{Cr}_2\text{O}_3$  by the alkaline potassium permanganate

$\text{KMnO}_4$

## Wacker process:

palladium catalyzed oxidation of ethylene to acetaldehyde as well as ketones. This process is known as Wacker's process.

## Mechanism:

Chemistry Homework

13 and Semister Chem-I

Name - Lakshmi Gowda

Roll no - 2500-06

Ans

12  
15

- (a) Derive expression for  $k'$  for 1<sup>st</sup> order reaction
- (b) Differential between molecularity and order of reaction.
- (c) a. write a note on Arrhenius equation.

Ans Rate expression for 1<sup>st</sup> order reaction

1. (a) There are the reaction in which the rate of reaction depends upon the conc<sup>n</sup> of one reacting species.

Consider a general reaction

Let the initial conc<sup>n</sup> of A be  $a$  moles per litre after time 't' second  $x$  moles of A decomposes to give  $x$  moles of B.

$$\text{rate conc} \propto [A]^n$$

$$(or) \frac{dx}{dt} = k(a-x)$$

$$\Rightarrow \frac{dx}{a-x} = k dt$$

Integrating on both sides,

$$\int \frac{dx}{a-x} = \int k dt$$

$$\ln(a-x) - kt = \ln a - \ln(a-x) - kt = \ln a - \ln(a-x) - kt \quad (1)$$

at  $t=0$  second,  $x=0$

Putting in eq (1)

$$\ln a - \ln a = \ln a - \ln(a-x) - kt$$

Putting the value of  $x$  in eq (1), we get

$$\ln(a-x) - kt = \ln a - \ln(a-x) - kt$$

$$\Rightarrow kt = -\ln(a-x) + \ln a$$

$$\Rightarrow kt = \ln \frac{a}{a-x}$$

$$\Rightarrow k = \frac{1}{t} 2.303 \log \frac{a}{a-x}$$

1. (b) Differentiate between molecularity and order of reaction:

### Molecularity

→ Molecularity is the no. of molecules taking part in a single step of a reaction.

→ It is always a whole no.

→ It is never zero.

→ It is a theoretical value determined from the single step of a chemical reaction.

→ It's value does not exceed 3.

### Order of reaction

→ Order of a reaction is defined as sum of the powers (exponents) to which the conc<sup>n</sup> terms are raised to the power in rate law.

→ It may be a whole or a fraction.

→ It may be zero.

→ It is an experimental value obtained from the rate eq<sup>n</sup>.

→ It's value does not exceed 3.

## 2. Arrhenius eq<sup>n</sup> :-

The quantitative relationship between rate constant and temperature is given by the following eq<sup>n</sup> known as Arrhenius Equation

$$k = A e^{-E_a/RT}$$

where  $k$  = Rate constant

$A$  = Frequency factor and is a constant.

$e$  = exponential factor

$E_a$  = Activation energy

$R$  = Gas constant

$T$  = Temperature.

Taking logarithm on both sides

$$\ln k = \ln A - \frac{E_a}{RT}$$

$$\ln k = \ln A - \frac{E_a}{RT}$$

$$2.303 \log k = 2.303 \log A - \frac{E_a}{RT}$$

$$\log k = \log A - \frac{E_a}{2.303RT}$$

3) Describe how the Social Contract were formed  
and the out become an Indian Republic.

3) Describe how the Social Contract were formed  
and the out become an Indian Republic.  
The Social Contract theory was developed by  
Hobbes, Locke and Rousseau. According to  
Hobbes, in the state of nature, man is in a  
state of war against man. To escape this  
state, men agree to form a social contract  
and establish a government. Locke believed  
that men have natural rights of life, liberty  
and property. They agree to form a government  
to protect these rights. Rousseau believed  
that men are born free and equal, but  
they are everywhere in chains. They agree  
to form a social contract to liberate  
themselves from these chains.

The Social Contract theory was developed by  
Hobbes, Locke and Rousseau. According to  
Hobbes, in the state of nature, man is in a  
state of war against man. To escape this  
state, men agree to form a social contract  
and establish a government. Locke believed  
that men have natural rights of life, liberty  
and property. They agree to form a government  
to protect these rights. Rousseau believed  
that men are born free and equal, but  
they are everywhere in chains. They agree  
to form a social contract to liberate  
themselves from these chains.

The Social Contract theory was developed by  
Hobbes, Locke and Rousseau. According to

## Explain the Rostow's Stages theory of Growth.

Economic growth is a multifaceted phenomenon. Both economic and non-economic factors influence the economic growth. It is noted that every country had to pass through different stages during the course of its economic growth. They are called the stages of economic growth.

1st. Rostow divides the stages into 4 categories. They are -  
1) Traditional  
2) Pre-conditions for take-off  
3) Take-off  
4) Maturity

2nd. Rostow's theory states that the stage of economic growth (1st) is most relevant and which is applicable. Rostow has classified the process of economic growth into 4 stages.

### The Traditional Society Stage :-

In the process of economic growth first or initial stage is the stage of traditional society. It has a features :-

- 1) Prevalence of agriculture
- 2) Significance of family and caste system
- 3) Political power

and the shift and shift rate  
of the technology terms.

3) The take-off stage - (1950)

The take-off stage is a period of time in which the economy is growing rapidly and moving towards a steady state.

Features:-

- 1) Focus attention on agriculture
- 2) Increase in demand
- 3) Increase in investment

4) The take-off stage - (1950)

The take-off stage is a period of time in which the economy is growing rapidly and moving towards a steady state.

The take-off stage is a period of time in which the economy is growing rapidly and moving towards a steady state.

Features:-

- 1) Increase in demand
- 2) Increase in investment
- 3) Increase in demand

5) The take-off stage - (1950)

The take-off stage is a period of time in which the economy is growing rapidly and moving towards a steady state.

The take-off stage is a period of time in which the economy is growing rapidly and moving towards a steady state.

Features:-

- 1) Changes in the character of labor
- 2) Changes in the character of investment
- 3) Technological changes

The class of high mass consumption is  
seen to be the last and  
most important stage of economic growth.  
There is a considerable increase in  
production.

Features:

- (a) Consumption of comforts and luxuries etc.
- (b) Increase of many of the service sectors.
- (c) This is a period of consumer sovereignty.

Criticism of Rodrik's stage theory:

- 1) Involvement of society not necessary  
for development.
- 2) Not applicable to all countries.
- 3) Overlap of different stages.
- 4) The class of high mass consumption not  
characteristic.
- 5) Lack of basis.

Surprise test

Q. Explain the function of money?

Ans. Money performs four main functions in today's society. It mainly serves as:

- 1. A medium of exchange
- 2. A standard of deferred payment
- 3. A store of wealth
- 4. A measure of value

Distribution Economy:

In theory, people can directly trade for exchanging goods and services without the need of any monetary transaction between the parties involved.

- Each of the parties involved in a transaction would be to find what the other party has to offer.
- The goods and service exchanged should be desirable.

## Money as a medium of exchange

A medium of exchange is an asset that can be used by a transaction to exchange goods and services.

1. It must be readily acceptable with no time or space or loss of value if carried off any given amount.
2. It must be easily divisible.

## Money as a store of wealth

Its services can't be stored and a lot of goods and services. Society requires more effective ways - a storing wealth.

## Money as a measure of value

Money can be used as a universal unit of account to measure the value of the goods and services exchanged in an economy.

## Prevalent metals as money

Especially in the past, gold and other precious metals have been successfully used as money in many societies. It is due to the following

1. They were a good medium of exchange for transactions, either immediately or in the future, as their value was known to high value relative to their weight.

2. Precious metals are considered a good store of wealth, as they are not perishable goods. They are expected to maintain their value because others would keep buying them in the future due to that fact being strong.

Economic growth - II

Simple part

(1)

Q  
Ans

Explain the different stages theory of growth?

Economic growth is a steadily increasing phenomenon. Both economic and non-economic factors influence the economic growth. As a nation of fact every country had to pass through different stages during the course of its economic growth.

Different economic have class find the stage of economic growth in critical perspective

Adam Smith the father of the economic growth in a sequence of 1) hunting 2) agriculture 3) manufacturing

4) Commercial & manufacturing

More over of the classified the stage into economic growth growth (1960) is not population and technology.

Walter Rostow in 1960s gave the stages of

Economic Growth & Stages

1) The five distinct stages theory in the process of economic growth. First and final stages is the initial stage and the final stage and the stages are based on the primary, secondary and tertiary.

Factors for Determination of Organization

- 1) Organization of faculty and staff
- 2) Physical plant
- 3) Staff work and work

- 4) Department work structure
- 5) A complex of interacting factors.

(1) The pre-conditions of staff → The profession of staff all the several types of economic growth are created in an account.

It may be called a stratification stage response for creating an account.

It may be the pre-conditions for the off-stage

Reconditioning of Staff

The pre-condition may be made slow change especially in affiliation and organization - structure because of rapid and economic growth.

The stage involves changes in staff.

Features

- 1) Less dependent organization
- 2) - expansion of staff
- 3) margin fund
- 4) Role of staff and investment
- 5) Staff in development of staff
- 6) Account of person staff

(1) The force of staff

Here all staff is followed by ratio majority staff.

In the evolution of any society in a definite period in which general economic material conditions of the society - the stage generally begins on account of some step forward which may come forward - creates a technological transition condition of the - take off stage :-

- (1) Rate of investment over 10%
- (2) Concentration of the leading sectors
- (3) Some positive feedback with

Features :-

- a) Economic penetration
- b) Great policy (1) Increase in demand
- c) Technical development
- d) Foreign trade
- e) New possibilities for production
- f) Large scale of capital but competition

The Entry to take off :-

Take off stage is followed by entry to the factory stage.

Residual demand :-

concerning as to the range of which the society affecting the technology through personal modern period of the stage of take off

## Features of

(2)

- (1) Change in the character of supply curve.
- (2) Change in the character of demand curve.
- (3) Transitioned thought.
- (4) etc. in the development etc.

## (1) The stage of high mass consumption?

It is the last and most important stage of economic growth characterized by excess and because of the excess surplus in this stage the inflationary of the economy.

### Features →

- (1) Consumption of surplus and surplus income.
- (2) Standard of living of the people more.
- (3) There is a period of economic stagnation.
- (4) High mass consumption in high inflationary period stage of high mass consumption.

(1) Traditional Society not necessary for development.

- (2) Not applicable to all countries.
- (3) Overlapping of different stages.
- (4) The stage high mass consumption is stage.

- (1) Traditional Society not necessary for development.
- (2) Not applicable to all countries.
- (4) The stage high mass consumption.

Q) What is money functions of money?  
Why money performs four main functions in day?

Satisfy its primary function as:

- 1) A medium of exchange.
- 2) A standard of deferred payment.
- 3) A store of wealth.
- 4) A measure of value.

Barter economy:

In other people are generally all functions would be done what the other party has to offer. The two persons in the

An economy based barter would be. Some restrictions.

Each of the parties involved in a transaction would have to search out the other party has to offer. The difference in the example above should agree that a program of officials one such conditions.

The goods and services exchange should be available all the time individuals benefit themselves.

Money can be every standard requirement and  
function's due to comparison with it. Its value  
money are measure of value.

Money can be also as universal unit  
accepted to measure the value of all the goods  
and services exchanges in economy.

In a money based economy prices can be  
indicated using only one measure of value.  
Transactions and people understanding of market  
goods or service is simple.

### Precious metal as money

Especially in the past gold and other  
precious metals have been frequently used money  
in many societies due to the following -

- ① They were a good medium of exchange for  
transactions requiring identifiability and in the  
future, as their value was known they could
- ② precious metals are considered good store  
wealth - as they are not perishable goods.

However, others would agree that, their  
shortness such as jewelry and ornaments would  
cause poor storing.

1. Find the sum of following series

10-10	1
20-20	1
30-30	1
40-40	1
50-50	1
60-60	1
70-70	1
80-80	1
90-90	1
100-100	1

2. (i) 10, 20, 30, 40, 50, 60, 70, 80, 90, 100 find sum  
 (ii) sum of first 10 terms of AP  
 (iii) sum of first 10 terms of GP

$$10 + 20 + 30 + 40 + 50 + 60 + 70 + 80 + 90 + 100 = \frac{10(10+100)}{2} = 550$$

- (i) Find the sum of first 10 terms of AP  
 (ii) Find the sum of first 10 terms of GP  
 (iii) Find the sum of first 10 terms of HP  
 (iv) Find the sum of first 10 terms of AP, GP, HP  
 (v) Find the sum of first 10 terms of AP, GP, HP

5. Find the mean of the following data.

- (i) Class intervals: 0-10, 10-20, 20-30, 30-40, 40-50, 50-60, 60-70, 70-80, 80-90, 90-100  
 Frequencies: 10, 20, 30, 40, 50, 60, 70, 80, 90, 100
- (ii) Class intervals: 10-20, 20-30, 30-40, 40-50, 50-60, 60-70, 70-80, 80-90, 90-100  
 Frequencies: 10, 20, 30, 40, 50, 60, 70, 80, 90

Class	f	cf	fx	f <sup>2</sup>	cf <sup>2</sup>	xf <sup>2</sup>
0-10	10	10	100	100	100	1000
10-20	20	30	400	400	900	3600
20-30	30	60	900	900	3600	10800
30-40	40	100	1600	1600	1600	6400
40-50	50	150	2500	2500	2250	11250
50-60	60	210	3600	3600	1260	21600
60-70	70	280	4900	4900	784	34300
70-80	80	360	6400	6400	1296	51200
80-90	90	450	8100	8100	2025	72900
90-100	100	550	10000	10000	3025	100000
<b>Total</b>	<b>550</b>		<b>55000</b>			<b>440000</b>

$$\bar{x} = \frac{\sum fx}{\sum f} = \frac{55000}{550} = 100$$

$$s^2 = \frac{\sum xf^2}{\sum f} - \bar{x}^2$$

$$= \frac{440000}{550} - 100^2$$

$$= 800 - 10000 = -9200$$

∴ The mean is 100.

- ∴ The variance is -9200.
- ∴ The standard deviation is  $\sqrt{-9200}$ .
- ∴ The coefficient of variation is  $\frac{\sqrt{-9200}}{100}$ .

প্রত্নতাত্ত্বিক সূত্রসমূহ :- প্রত্নতাত্ত্বিক সূত্রসমূহ চ দুইটি ভাগে বিভক্ত। (i) লিপিকৃত সূত্রসমূহ, (ii) মুদ্রিত সূত্রসমূহ।

- (i) লিপিকৃত
- (ii) মুদ্রিত
- (iii) লিপিকৃত
- (iv) মুদ্রিত

FINAL

(1) Discuss about the sources of Ancient Indian History.

Answer- Ancient India has several sources of history. Some of the sources are as follows:-

- (i) Epigraphical sources
- (ii) Literary sources

(i) Epigraphical sources:- Epigraphical sources are those which are inscribed on stone or metal.

- (a) Pillars and inscriptions
- (b) Coins, seals and tokens
- (c) Cave inscriptions

(ii) Literary sources:- Literary sources are those which are written in books or manuscripts.

- (a) Puranas
- (b) Smritis
- (c) Histories
- (d) Epics

(iii) Epigraphical sources:- Epigraphical sources are those which are inscribed on stone or metal.

- (a) Pillars and inscriptions
- (b) Coins, seals and tokens
- (c) Cave inscriptions

(iv) Literary sources:- Literary sources are those which are written in books or manuscripts.

NAME OF THE EXAMINATION :- surprise test

EXAMINATION ROLL NO :- 87

DATE & YEAR :- 28/01/2020

SUBJECT :- History

PAPER :- COPE-11(A)

प्रश्न

1) राष्ट्रवादीयों को मजदूर वर्ग की ओर से अत्यधिक असह्युक्त मजदूर प्रतिक्रिया।

अस- 85

यह प्रश्नक प्रश्न पूरा करने के लिए सहायक सामग्री पढ़ना आवश्यक है।

अस- राष्ट्रवादीयों को मजदूर

को — को सामूहिक आंदोलन प्रेरित।

(d) Dante

Handwritten text describing Dante's work, mentioning 'Divine Comedy' and 'Inferno'.

20) Chief Basis of Renaissance

Handwritten text defining the chief basis of the Renaissance.

- Handwritten list of items related to the Renaissance, including 'Humanism', 'Classicism', etc.

(e) Abolition of Slavery

Handwritten text discussing the abolition of slavery, its historical context, and the role of various nations.

Q1) Discuss about the National level transition from feudalism to capitalism

30) Discuss about the National level transition from feudalism to capitalism

Q2) Discuss about the National level transition from feudalism to capitalism

# Polynomial

$$\text{Degree } (x^2 + 2x) = 2$$

$$\text{Degree } (x^3 + 1) = 3$$

$$\text{Degree } (x^4 - 2x) = 4$$

$$\text{Degree } (x^2 + 3x + 1) = 2$$

1. Add the binomial equations:

a. Find the value of  $x^2 + 3x + 1$

b. Prove that  $x^2 + 3x + 1 = 1$

2. Add the binomial equations:

a. Find the value of  $x^2 + 3x + 1 = 1$

$$\text{Degree } (x^2 + 3x + 1) = 2$$

# FLY LEAF

## 1. Question 1

Full marks - 20

1. Answer the following question

(20) marks

a. Give  $A^{-1}B$ ,  $B^{-1}A$  and  $AB^{-1}$

$$\text{or } A = \begin{bmatrix} 2 & 6 & -1 \\ 7 & 4 & 3 \end{bmatrix} \quad \text{or } \begin{bmatrix} 2 & 4 \\ 1 & -4 \end{bmatrix}$$

$$B = \begin{bmatrix} 1 & 1 \\ -1 & 1 \end{bmatrix} \quad \text{and } E = \begin{bmatrix} -5 \\ 2 \end{bmatrix}$$

b. Calculate the signature of  $E$  (Eigenvalue relation).  
Give an example.

(10) marks

2. Answer the following question

a. Find  $A^{-1}$  if  $A = \begin{bmatrix} 12 & 3 \\ 40 & 6 \\ 32 & 8 \end{bmatrix}$

b. Convert to sub field

$$PA(-2, 1)$$

**Question 1**

- 1. Find the rank of the matrix
- 2. Find the null space of the matrix
- 3. Find the column space of the matrix
- 4. Find the row space of the matrix

$$A = \begin{bmatrix} 1 & 2 & 3 \\ 2 & 3 & 4 \\ 3 & 4 & 5 \end{bmatrix} \quad B = \begin{bmatrix} 1 & 2 \\ 2 & 3 \\ 3 & 4 \end{bmatrix}$$

$$C = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} \quad D = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$$

Q.2.  $A = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$

$$\begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} + 2 \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} = \begin{bmatrix} 3 & 6 \\ 6 & 9 \end{bmatrix}$$

$$= \begin{bmatrix} 3 & 6 \\ 6 & 9 \end{bmatrix} = 3 \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$$

$$= \begin{bmatrix} 3 & 6 \\ 6 & 9 \end{bmatrix}$$

Q.3.  $A = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$

$$\begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} + \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} = \begin{bmatrix} 2 & 4 \\ 4 & 6 \end{bmatrix}$$

$$= \begin{bmatrix} 2 & 4 \\ 4 & 6 \end{bmatrix} = 2 \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$$

Definition: An eigenvalue  $\lambda$  of a matrix  $A$  is a scalar such that  $Ax = \lambda x$  for some non-zero vector  $x$ .

Example:  $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ ,  $\lambda = 5$  is an eigenvalue with  $x = \begin{pmatrix} 1 \\ 2 \end{pmatrix}$ .

2. a)  $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$

$$\begin{aligned}
 |A - \lambda I| &= \begin{vmatrix} 1-\lambda & 2 \\ 3 & 4-\lambda \end{vmatrix} = (1-\lambda)(4-\lambda) - 6 \\
 &= \lambda^2 - 5\lambda + 4 - 6 \\
 &= \lambda^2 - 5\lambda - 2
 \end{aligned}$$

$M_1 = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{21} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_2 = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{12} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{31} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{22} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{32} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$M_{13} = \begin{vmatrix} 1 & 2 \\ 3 & 4 \end{vmatrix} = 1 \cdot 4 - 6 = -2$

$\vec{r}_1 = x_1 \hat{i} + y_1 \hat{j} + z_1 \hat{k}$   
 $\vec{r}_2 = x_2 \hat{i} + y_2 \hat{j} + z_2 \hat{k}$   
 $\vec{r}_3 = x_3 \hat{i} + y_3 \hat{j} + z_3 \hat{k}$

$\vec{r}_1 \cdot \vec{r}_2 = x_1 x_2 + y_1 y_2 + z_1 z_2$   
 $\vec{r}_1 \cdot \vec{r}_3 = x_1 x_3 + y_1 y_3 + z_1 z_3$   
 $\vec{r}_2 \cdot \vec{r}_3 = x_2 x_3 + y_2 y_3 + z_2 z_3$

$$A = \begin{bmatrix} x_1 & x_2 & x_3 \\ y_1 & y_2 & y_3 \\ z_1 & z_2 & z_3 \end{bmatrix}$$

$$A_1 = \begin{bmatrix} y_2 & y_3 \\ z_2 & z_3 \end{bmatrix}$$

$$A_2 = \begin{bmatrix} x_1 & x_3 \\ y_1 & y_3 \\ z_1 & z_3 \end{bmatrix}$$

$$A_3 = \begin{bmatrix} x_1 & x_2 & x_3 \\ y_1 & y_2 & y_3 \\ z_1 & z_2 & z_3 \end{bmatrix}$$

$$A_4 = \begin{bmatrix} x_2 & x_3 \\ y_2 & y_3 \\ z_2 & z_3 \end{bmatrix}$$

Change / Derivative of the length

Using (1) for  $dy/dx = 1/x^2 + 2/x^3$

At  $x = 1$ ,  $dy/dx = 1 + 2 = 3$

Graph

Volume of a cone

eg. 2.4

Using (1) for  $V = \frac{1}{3}\pi r^2 h$

At  $r = 1$ ,  $dV/dr = \frac{2}{3}\pi h$

At  $r = 1$ ,  $dV/dr = \frac{2}{3}\pi(3) = 2\pi$

eg. 2.5

Using (1) for  $V = \frac{4}{3}\pi r^3$

At  $r = 1$ ,  $dV/dr = 4\pi r^2$

At  $r = 1$ ,  $dV/dr = 4\pi(1)^2 = 4\pi$

At  $r = 1$ ,  $dV/dr = 4\pi$

At  $r = 1$ ,  $dV/dr = 4\pi$

$$y^2 = x^2 - 1 \Rightarrow y = \pm \sqrt{x^2 - 1}$$

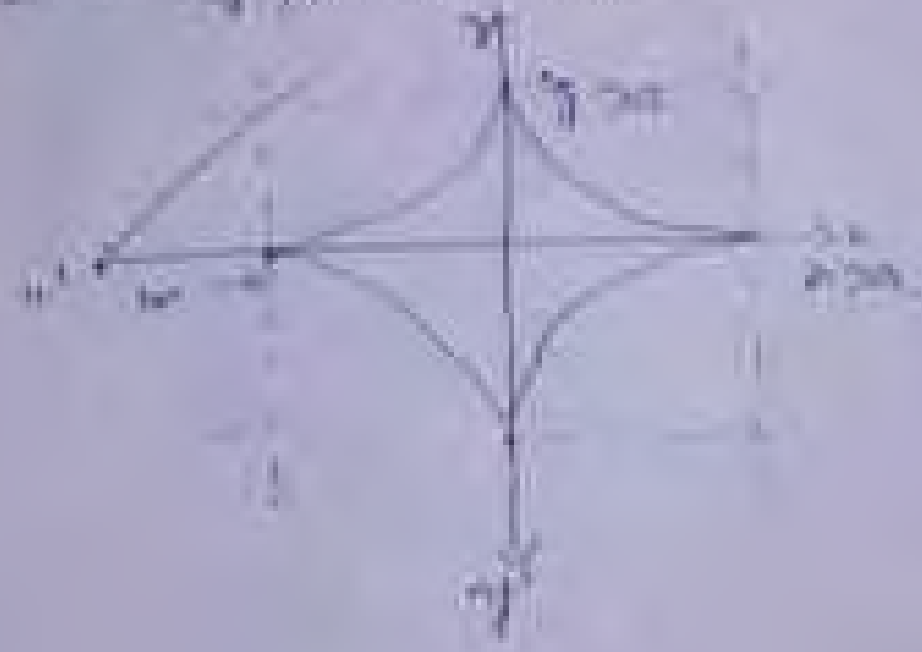

$$x^2 - 1 = 0 \Rightarrow x = \pm 1$$

$$y^2 = x^2 - 1 \Rightarrow y = \pm \sqrt{x^2 - 1}$$

$$x^2 - 1 = 0 \Rightarrow x = \pm 1$$

Answer:

Two hyperbolic branches of the hyperbola  $y^2 = x^2 - 1$  are shown. The vertices are at  $(-1, 0)$  and  $(1, 0)$ . The asymptotes are the lines  $y = \pm x$ .

2. b)  $y = \pm \sqrt{x^2 - 1}$

Mathematics

Examinable Unit - 2021

Case - 6 (20 Marks)

1. Answer the following questions (20 Marks)

a. Find the sum of following series  
 $2 + 4 + 8 + \dots$

b. Find the value and range of the binomial expansion  
 $\sqrt{\left(\frac{20}{19}\right)^2 + \left(\frac{20}{19}\right)^2} = \sqrt{\left(\frac{20}{19}\right)^2}$

2. Answer the following questions (10 Marks)

a. Case 2 (2-11) + 12 (2-10) + 13 (2-9) + \dots

Mathematics

Examinable Unit - 2021

Case - 7 (20 Marks)

1. Answer the following questions (20 Marks)

a. Calculate the fundamental group of circle as example.

b. Prove that  $\frac{1}{1+x} = \sum_{n=0}^{\infty} (-1)^n x^n$

2. Answer the following questions (10 Marks)

a. State and prove the Cauchy mean value theorem.

Alim:  $\frac{12}{15}$  akhary

Year: 2nd / 3rd

Q) What is indeterminate form?

Ans- An indeterminate form is an expression involving two functions whose limit cannot be determined solely from the limits of the individual functions. These forms are common in calculus. Indeed, the limit definition of the derivative is the limit of an indeterminate form.

$$\text{Example: } \frac{0}{0}, \frac{\infty}{\infty}, 0 \cdot \infty, \infty - \infty, 1^{\infty}$$

Q) calculate  $\lim_{x \rightarrow 0} \frac{\sin x}{x}$  using L'Hôpital's rule.

$$f(x) = \frac{\sin x}{x}$$

$$\lim_{x \rightarrow 0} f(x) = \frac{0}{0} = 1$$

$$\lim_{x \rightarrow 0} f'(x) = \frac{\cos x}{1} = 1$$

Let  $f(x)$  and  $g(x)$  be continuous mapping and differentiable on  $[a, b]$  and assume that  $g'(x) \neq 0 \forall x \in (a, b)$ , then for

There exists a real number  $\lambda \in (a, b)$  such that

$$\frac{f(b) - f(a)}{g(b) - g(a)} = \frac{f'(\lambda)}{g'(\lambda)}$$

Proof

Let us define  $F(x)$

$$F(x) = f(x) - Ag(x) \quad \text{--- (1)}$$

(where  $A$  is a constant)

We have choose that  $F(a) = F(b)$

$$\Rightarrow F(a) - Ag(a) = F(b) - Ag(b)$$

$$\Rightarrow Ag(a) - Ag(b) = f(b) - f(a)$$

$$\Rightarrow A(g(a) - g(b)) = f(b) - f(a)$$

$$\therefore A = \frac{f(b) - f(a)}{g(a) - g(b)} \quad \text{--- (2)}$$

As given  $f$  and  $g$  are continuous on  $[a, b]$

1.  $f(x) = 0$  is also continuous on  $[a, b]$

2.  $f(x) = 0$  is continuous on  $[a, b]$

The first two of the above conditions that  $f$  is continuous

Similarly  $f$  and  $g$  are differentiable on  $[a, b]$

3.  $f(x)$  is also diff on  $[a, b]$

4.  $f(x)$  is also diff on  $[a, b]$

(because the sum of two diff fun<sup>s</sup> is a diff)

So we have  $f(x) = f'(x)$

then by Rolle's theorem  $\exists$

at least  $c \in (a, b)$

$$s.t. \boxed{f'(c) = 0}$$

we have  $f(x) = f'(x) + Ag(x)$

$$f'(x) = f'(x) + Ag'(x)$$

$$f'(c) = f'(c) + Ag'(c)$$

$$f'(c) = 0$$

$$= f'(c) + Ag'(c) = 0$$

Form:  $\frac{f(x)}{g(x)}$  with  $g(x) \neq 0$

$$= \frac{f'(x)}{g'(x)}$$

$$\therefore \frac{d}{dx} \left( \frac{f(x)}{g(x)} \right) = \frac{f'(x)g(x) - f(x)g'(x)}{g(x)^2}$$

Putting value  $x=0$  in  $\frac{d}{dx} \left( \frac{f(x)}{g(x)} \right)$  we get

$$\frac{f'(0)g(0) - f(0)g'(0)}{g(0)^2} = \frac{f'(0)}{g(0)} \quad \text{(Ans)}$$

Name: [unclear] Arora

Year: 2020-2021

Sub: Mathematics

Date: 2/10/21

Class: 12th year

Chap: 2nd Sem

Ques: 9

Q1) Find the PDE by eliminating arbitrary constant

$$z = f(x+ay)$$

$$\text{from } z = f(x+ay) \quad \text{--- (1)}$$

diff<sup>n</sup> eq<sup>n</sup> (1) by partially w.r.t x

$$\frac{\partial z}{\partial x} = f'(x+ay)$$

$$\rightarrow p = f'(x+ay) \quad \text{--- (2)}$$

Again diff<sup>n</sup> eq<sup>n</sup> (1) by partially w.r.t y

$$\frac{\partial z}{\partial y} = f'(x+ay) \cdot a = f'(x+ay) \cdot a \quad \text{--- (3)}$$

Putting the value of  $f'(x+ay)$  from eq<sup>n</sup> (2)

putting the value of  $f'(x+ay)$  from eq<sup>n</sup> (3)

$$\rightarrow q = p \cdot a$$

$$\rightarrow \boxed{q - py = 0}$$

Problem 111

to find the order and degree of the diff<sup>n</sup> eq<sup>n</sup>

$$y \left( \frac{dy}{dx} \right)^2 + \left( \frac{dy}{dx} \right)^3 = x \left( \frac{dy}{dx} \right)$$

Ans. - order = 1

degree = 2

Q. 2. Solve  $x^2 (y-2) + y^2 (2-x)y = x^2 (2-y)$

Soln. -  $x^2 (y-2) + y^2 (2-x)y = x^2 (2-y) = 0$

Above homogeneous first order

Above eq<sup>n</sup> (2) is of the form  $P(x)dx + Q(y)dy = 0$

It is called homogeneous first order eq<sup>n</sup>

$\therefore$  Let  $dy/dx = v$  substituting eq<sup>n</sup>

$$\frac{dx}{x^2 (y-2)} + \frac{dy}{y^2 (2-x)} = \frac{dx}{x^2 (2-y)}$$

Hence  $\frac{dx}{x} + \frac{1}{y} = \frac{1}{2}$  on multiplication we

get each fraction  $\frac{dx}{x} + \frac{dy}{y} = \frac{dx}{2}$

$$x - 2 + 2 = x + 2 - y$$

$$\frac{dx}{x^2} + \frac{dy}{y^2} = \frac{dx}{2}$$

○

$$\Rightarrow \frac{dx}{x} + \frac{dy}{y} + \frac{dz}{z} = 0$$

$$\Rightarrow \int \frac{dx}{x} + \int \frac{dy}{y} + \int \frac{dz}{z} = 10$$

$$\Rightarrow \ln x + \ln y + \ln z = C$$

$$\Rightarrow \ln \frac{1}{x} + \ln \frac{1}{y} + \ln \frac{1}{z} = -C = C_1 \quad \text{--- (1)}$$

Again taking  $\frac{1}{x} = \frac{1}{y} = \frac{1}{z}$  as multiplier

$$\text{we get each ratio} = \frac{\frac{dx}{x}}{\frac{1}{x}} + \frac{\frac{dy}{y}}{\frac{1}{y}} + \frac{\frac{dz}{z}}{\frac{1}{z}}$$

$$= \frac{\frac{dx}{x} + \frac{dy}{y} + \frac{dz}{z}}{\frac{1}{x} + \frac{1}{y} + \frac{1}{z}}$$

$$\Rightarrow \frac{dx}{x} + \frac{dy}{y} + \frac{dz}{z} = 0$$

$$\Rightarrow \int \frac{dx}{x} + \int \frac{dy}{y} + \int \frac{dz}{z} = 10$$

$$\Rightarrow \ln x + \ln y + \ln z = \ln z - \ln c$$

$$\Rightarrow \ln xyz = \ln c$$

$$\Rightarrow xyz = c \quad \text{--- (2)}$$

$$\therefore \text{required soln } F\left(\frac{1}{x} + \frac{1}{y} + \frac{1}{z} = xyz\right) = 0$$

(Ans)

11/10

Topic - ...  
 Date - ...  
 Page - ...

Q1) Find the domain and range of the function

$f(x) = \sqrt{x}$

Ans - Interval of  $x$  is  $[0, \infty)$

Since function is defined for  $x \geq 0$

Therefore the domain of  $f$  consists of all points in  $\mathbb{R}$  greater than or equal to 0

$\therefore D = \{x \in \mathbb{R} : x \geq 0\}$

and the range of function is  $[0, \infty)$

Q2) Use the graph of  $y = x^2 + 2x + 1$  find the domain

Ans - Interval of  $x$  is  $(-\infty, \infty)$

By continuity of curve  $y = x^2 + 2x + 1$

$y = x^2 + 2x + 1 = (x+1)^2$

Q3) Use C-I definition to prove that  $\lim_{x \rightarrow 2} (x^2 - 4) = 0$

$f(x) = x^2 - 4$

Ans - By defn of limit we know that

We have to show that for given  $\epsilon > 0$ ,  $\exists \delta > 0$  s.t.

$|x - 2| < \delta \implies |x^2 - 4| < \epsilon$

$$\left| \frac{1}{x} - \frac{1}{2} \right| < \epsilon$$

$$\Rightarrow \left| \frac{2-x}{2x} \right| < \epsilon$$

$$\Rightarrow \frac{|2-x|}{2|x|} < \epsilon$$

$$\Rightarrow |2-x| < 2\epsilon|x|$$

we need to find  $\delta$  such that  $|x-2| < \delta$  implies  $|2-x| < 2\epsilon|x|$

$$\Rightarrow \delta < 2\epsilon|x|$$

$$\Rightarrow \delta < 2\epsilon \cdot 2$$

$$\Rightarrow \delta < 4\epsilon$$

$$\Rightarrow \delta < 4\epsilon$$

$$\Rightarrow \delta < 4\epsilon$$

Thus if  $\delta = 4\epsilon$ , which ever is smaller

$$\lim_{x \rightarrow 2} \frac{1}{x} = \frac{1}{2} \quad (\text{proved})$$

③ Show that  $\lim_{x \rightarrow 2} \frac{x^2-4}{x-2} = 4$  using  $\epsilon$ - $\delta$  definition

and putting  $\delta = \epsilon$

$$\lim_{x \rightarrow 2} \frac{x^2-4}{x-2} = \lim_{x \rightarrow 2} \frac{(x-2)(x+2)}{x-2}$$

$$\lim_{x \rightarrow 2} (x+2) = \lim_{x \rightarrow 2} \frac{x^2-4}{x-2}$$

$$= \lim_{x \rightarrow 2} \frac{(x-2)(x+2)}{x-2}$$

$$= \lim_{x \rightarrow 2} (x+2)$$

$$= 4 \quad (\text{proved})$$

Q. Define the definition of vector space and give an example

→ A non-empty set  $V$  is said to be a vector space if for every  $u, v \in V$  and scalar  $\alpha, \beta$ , the binary operations of addition and scalar multiplication and  $\alpha$  to satisfy some basic properties.

Example

Let  $u = (1, 2, 3)$  and  $v = (2, 3, 4)$

$w = (1, 2, 3)$

$\frac{1}{2}u + \frac{1}{2}v = \frac{1}{2}(1, 2, 3) + \frac{1}{2}(2, 3, 4)$

$= \frac{1}{2}(1, 2, 3) + \frac{1}{2}(2, 3, 4) = \frac{1}{2}(1+2, 2+3, 3+4)$

$= \frac{1}{2}(3, 5, 7) = (\frac{3}{2}, \frac{5}{2}, \frac{7}{2})$

$= (\frac{3}{2}, \frac{5}{2}, \frac{7}{2})$

(2) In any vector space  $V$ , it is proved that

a)  $\alpha 0 = 0$ , where  $\alpha \in \mathbb{R}$  &  $0 \in V$

b)  $0v = 0 \rightarrow v \in V$

Proof

a) Let  $v$  be any vector space

to prove that  $\alpha 0 = 0$

Let  $L$  be a subspace of  $V$ .  
 We want to show that  $L$  is a subspace of  $V$ .  
 We will show that  $L$  is closed under addition and scalar multiplication.

Let  $u, v \in L$  and  $\alpha \in \mathbb{R}$ .  
 We want to show that  $u+v \in L$  and  $\alpha u \in L$ .  
 By the property of  $L$ , we have  $u+v \in L$  and  $\alpha u \in L$ .

To prove that  $L$  is a subspace of  $V$ , we need to show that  $L$  is closed under addition and scalar multiplication.  
 By the property of  $L$ , we have  $u+v \in L$  and  $\alpha u \in L$ .

1. The point  $(1, 1)$  is a stationary point of the curve  $y = x^3 - 3x^2 + 3x + 1$ .  
Find the nature of this stationary point.

$y = x^3 - 3x^2 + 3x + 1$   
 $\frac{dy}{dx} = 3x^2 - 6x + 3$   
 $\frac{d^2y}{dx^2} = 6x - 6$   
At  $(1, 1)$ ,  $\frac{d^2y}{dx^2} = 6(1) - 6 = 0$

$\frac{d^3y}{dx^3} = 6$   
Since  $\frac{d^3y}{dx^3} > 0$ , the point  $(1, 1)$  is a point of inflexion.

### 1) Graphical Solution

→ This method involves plotting all the constraints and the objective function on a graph.

### 2) Formulation of LPP

Linear programming is a technique for maximizing or minimizing a linear function for independent variables in order to achieve maximum profit.

A LPP consists of 3 components.

- 1. Decision variable
- 2. Objective function
- 3. Constraints

### 1) Solve the LPP

### 2) Maximize $Z = 4x_1 + 3x_2$

$$\text{Subject to } 2x_1 + 3x_2 \leq 12$$

$$x_1 + x_2 \leq 4$$

$$x_1 \geq 0, x_2 \geq 0$$

$$0 \leq x_1 \leq 4$$

graphically.

Ans: —  $\text{max } Z = 4x_1 + 3x_2$

$$s.t. \quad 2x_1 + 3x_2 \leq 12 \quad \text{--- (1)}$$

$$x_1 + x_2 \leq 4 \quad \text{--- (2)}$$

Find the area of the region bounded by the curves

$$y = \sqrt{x} \text{ and } y = x^2$$

The region is shaded in blue.

From the graph, we see that

$$x = 0 \text{ and } x = 1$$

The area is a shaded region:

Coordinates of  $P_1$  are  $(0, 0)$

$$+ (1, 1), z = 7 \times 1 + 1 \times 1$$

$$= 7 + 1 = 8$$

$$= 8 \times \frac{1}{2} = 4$$

Coordinates of  $P_2$  are  $(1, 0)$

$$+ (1, 0), z = 7 \times 0 + 1 \times 0$$

$\det(A) = \det(B) = \det(C) = \det(D)$   
 $\det(A) = \det(B) = \det(C) = \det(D)$

Also  $\det(A) = \det(B) = \det(C) = \det(D)$

(1) Prove that the following system of  
 linear equations has a unique solution

$2x + 3y + z = 1$   
 $x + 2y + 3z = 2$

(2) Prove that the following system of  
 linear equations has a unique solution

$2x + 3y + z = 1$   
 $x + 2y + 3z = 2$

Use matrix method to solve the

where  $A = \begin{pmatrix} 2 & 3 & 1 \\ 1 & 2 & 3 \end{pmatrix}$ ,  $X = \begin{pmatrix} x \\ y \\ z \end{pmatrix}$ ,  $B = \begin{pmatrix} 1 \\ 2 \end{pmatrix}$

$A_1 = \begin{pmatrix} 2 \\ 1 \end{pmatrix}$ ,  $A_2 = \begin{pmatrix} 3 \\ 2 \end{pmatrix}$ ,  $A_3 = \begin{pmatrix} 1 \\ 3 \end{pmatrix}$

$\det(A) = \begin{vmatrix} 2 & 3 \\ 1 & 2 \end{vmatrix} = 4 - 3 = 1$

$2x_1 + 3x_2 = 2 \quad \text{--- (1)}$

$3x_1 + 2x_2 = 3 \quad \text{--- (2)}$

$\det(A) \neq 0 \Rightarrow A^{-1}$  exists

$X = A^{-1}B$   
 $x = \dots$   
 $y = \dots$   
 $z = \dots$

$$2x_1 + 3x_2 = 2 \quad \text{--- (1)}$$

$$3x_1 + 2x_2 = 3 \quad \text{--- (2)}$$

$c_1(1) + c_2(2)$  such that  $2x_1 + 3x_2 = 0$

$$2c_1 + 3c_2 = 0$$

The set is degenerate solution.

Example

$c_1(1) + c_2(2)$  such

$$2x_1 + 3x_2 = 0$$

$$2c_1 + 3c_2 = 0$$

The set is not degenerate solution.

The set is not degenerate solution.

~~Map and Survey~~

Q.1 - Question

Map and Survey

- 1) What is a map?
- 2) How is a map made?
- 3) What are the different types of maps?
- 4) How is a map used?
- 5) What are the different types of surveys?
- 6) How is a survey made?

Q.2 - Answer

- 1) A map is a representation of a part of the earth's surface on a flat surface.
- 2) A map is made by using a scale and a compass.
- 3) The different types of maps are physical, political, and thematic.
- 4) A map is used to show the location of a place and to measure the distance between two places.
- 5) The different types of surveys are aerial, ground, and satellite.
- 6) A survey is made by using a theodolite and a level.

 Fourier Series

Mathematical Physics  
 2020-21

Q.1) Prove that  $\int_{-\pi}^{\pi} x^2 \cos nx dx = \frac{2nx \cos nx + 2 \sin nx}{n^3}$

Ans:

We have  $f(x) = \frac{x^2}{2} + \sum_{n=1}^{\infty} a_n \cos nx + \sum_{n=1}^{\infty} b_n \sin nx$

Let  $f(x) = x^2$

$$\text{Then } a_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) dx = \frac{1}{\pi} \int_{-\pi}^{\pi} x^2 dx = \frac{1}{\pi} \left[ \frac{x^3}{3} \right]_{-\pi}^{\pi}$$

$$\text{So } a_0 = \frac{1}{\pi} \left[ \frac{\pi^3}{3} + \frac{\pi^3}{3} \right] = \frac{2\pi^2}{3}$$

$$\text{Now } a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \cos nx dx = \frac{1}{\pi} \int_{-\pi}^{\pi} x^2 \cos nx dx$$

$$= \frac{1}{\pi} \left[ x^2 \int_{-\pi}^{\pi} \cos nx dx - \int_{-\pi}^{\pi} 2x \cos nx dx \right]$$

$$= \frac{1}{\pi} \left[ \left( x^2 \frac{\sin nx}{n} \right)_{-\pi}^{\pi} - 2 \int_{-\pi}^{\pi} x \frac{\sin nx}{n} dx \right]$$

$$= \frac{1}{\pi} \left[ \left( x^2 \sin nx - \pi^2 \sin n\pi \right) \frac{1}{n} - 2 \int_{-\pi}^{\pi} \frac{x \sin nx}{n} dx \right]$$

$$= \frac{1}{\pi} \left[ \int_{-\pi}^{\pi} -2x \left( \frac{\cos nx}{n} \right) dx - \frac{2}{n} \left( \frac{\cos nx}{n} \right) \right]_{-\pi}^{\pi}$$

$$= \frac{1}{\pi} \left[ \int_{-\pi}^{\pi} 2x \cos nx dx - 2\pi^{-n} (\cos(-n\pi)) \right] \frac{1}{n^2} = \frac{2}{\pi n^2} \left[ \sin nx - \cos nx \right]_{-\pi}^{\pi}$$

$$a_n = \frac{1}{\pi} \left[ \frac{2\pi n \cos n\pi}{n^2} \right] = \frac{4}{n^2} (-1)^n$$

$$\text{Similarly } b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \sin nx dx = \frac{1}{\pi} \int_{-\pi}^{\pi} x^2 \sin nx dx$$

$$= \frac{1}{\pi} \int_{-\pi}^{\pi} [x^2] \cos nx dx - \int_{-\pi}^{\pi} [x^2] \sin nx dx$$

$$= \frac{1}{\pi} \left[ \int_{-\pi}^{\pi} x^2 \left( \frac{-\cos nx}{n} \right) dx - \int_{-\pi}^{\pi} x \left( \frac{-\sin nx}{n} \right) dx \right]$$

= 0 (Also the value of  $\int_{-\pi}^{\pi} f(x) dx$  when  $f(x)$  is an odd function, here  $f(x) = x^2$  is an even function so using which it is an even function.

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos nx + \sum_{n=1}^{\infty} b_n \sin nx$$

$$\text{Let } f(x) = \frac{20x^2}{2} + \sum_{n=1}^{\infty} \frac{4}{n^2} (-1)^n \cos nx$$

$$f(x) = 10x^2 + 4 \sum_{n=1}^{\infty} \frac{(-1)^n \cos nx}{n^2} \quad \text{(Ans)}$$

20) write power series identity for  $f(x) = e^x$  using cosine series of  $f(x)$

Ans

$$\text{For cosine series let } a_0 = \frac{2}{\pi} \int_0^{\pi} f(x) \cos 0 dx = \frac{2}{\pi} \int_0^{\pi} e^x dx$$

$$\text{Let } a_n = \left[ \frac{2}{\pi} \int_0^{\pi} e^x \cos \frac{nx}{2} dx - \left( \frac{2}{\pi} \int_0^{\pi} e^x \sin \frac{nx}{2} dx \right) \right]$$

$$= \frac{2}{\pi n^2} (\cos nx - 1) \quad \text{(Ans)}$$

$$\text{Let } b_n = \frac{2}{\pi} \int_0^{\pi} f(x) \sin nx dx = \frac{2}{\pi} \int_0^{\pi} e^x \sin nx dx$$

21) write power series identity for  $f(x) = e^x$

$$\frac{1}{2} \int_{-\pi}^{\pi} f(x) dx = \frac{a_0}{2} + \sum_{n=1}^{\infty} \frac{a_n^2 + b_n^2}{2}$$

$$\frac{1}{2} \int_{-\pi}^{\pi} f(x) dx = \frac{2}{2} + \sum_{n=1}^{\infty} \frac{4(\cos nx - 1)^2}{2}$$

$$\int_0^1 x^2 dx = \left[ \frac{x^3}{3} \right]_0^1 = \frac{1}{3} \text{ (Area)}$$

$$\int_0^1 x^3 dx = \left[ \frac{x^4}{4} \right]_0^1 = \frac{1}{4} \text{ (Area)}$$

$$\int_0^1 x^4 dx = \left[ \frac{x^5}{5} \right]_0^1 = \frac{1}{5} \text{ (Area)}$$

and  $\int_0^1 dx$   
 is the area

Let  $y = \ln x$

$$dy = \frac{1}{x} dx$$

$$x dy = dx$$

③ The area under the curve  $y = \ln x$  from  $x = 1$  to  $x = e$  is  $\int_1^e \ln x dx$

$$\int_1^e \frac{1}{x} dx = \int_0^1 e^{-t} dt = 1 - \frac{1}{e} = \frac{e-1}{e}$$

Pressure level

1) First law of thermodynamics applied to an isolated system  
Process expansion of gas?  
The first law of thermodynamics applied to an isolated process

According to first law of thermodynamics

$$dQ - dW = du \quad (1)$$

where  $dQ$  = small amount of heat given to gas,  
 $du$  = increase in internal energy of gas if it  
is doing work against external pressure.

2) Since in an adiabatic process temperature  
of gas remains constant, hence there is no  
change in the internal energy of the gas

$$du = 0$$

Putting this value in above eqn - (1)

$$dQ = dW$$

Case - 1  
During adiabatic expansion of gas  $dQ = 0$  we  
have  $dW$  is also positive. Therefore heat will  
have to be supplied to gas.

Case - 2  
During adiabatic compression of gas  $dQ = 0$   
we have  $dW$  is also negative. Therefore heat  
will be given out by gas.

At state 1 of an isothermal process

we know that for a gas  $P_1 V_1 = nRT_1$  and  $P_2 V_2 = nRT_2$

$P_1 V_1 = nRT_1$

$P_1$  = Pressure of gas

$V_1$  = volume of gas

$T_1$  = temperature of gas

$R$  = Gas constant (universal gas constant)

since in an isothermal process

①

$T_1 = T_2$  constant

$n$  = no. of moles

$R$  = constant

Thus in an isothermal process, let the initial state of gas 1,  $P_1, V_1$ , and the pressure & volume of the gas.

Let  $P_2, V_2$  be the pressure & volume of the gas in final state.

Consider that the gas moves from initial state  $(P_1, V_1)$  to final state  $(P_2, V_2)$  by an isothermal process.

Then eq for an isothermal process becomes

$P_1 V_1 = P_2 V_2$

Q1) Define Isochoric process?

Ans

An isochoric process can be defined as a process in which the volume of the surrounding is not allowed to vary. In such a condition, once the process is initiated, no work is done. The energy lost by the fluid is converted into heat.

Q2) Define isobaric process.

Ans

An isobaric process is a thermodynamic process in which the pressure of the system remains constant. At a constant pressure, the change in temperature results in the change in volume. Any system where the temperature is maintained constant is an example of an isobaric process.

Q3) Explain why piston is removed.

Ans

The reason piston is removed is to allow the gas to expand. The piston is removed so that the gas can expand and do work. The piston is removed so that the gas can expand and do work.

Q4) Explain why piston is removed. The piston is removed so that the gas can expand and do work. The piston is removed so that the gas can expand and do work.

Define enthalpy.

Ans:-

$$H = E + PV$$

where  $H$  = enthalpy

$E$  = internal energy

$P$  = Pressure

$V$  = volume

Define entropy with its unit.

Ans:-

Entropy is a measure of randomness or disorder of the system, the greater

the randomness, the higher the entropy. Its unit is  $J/K$ .

Q Describe construction and working principle of full wave bridge rectifier with neat and clean circuit diagram.

Ans. Bridge full wave rectifier employs four semiconductor diodes to form a bridge. The circuit diagram of a bridge full wave rectifier is shown in fig.

The diodes  $D_1, D_2, D_3, D_4$  are connected to the four arms of the bridge ABCD. Input A.C. is applied across the primary coil of the transformer. The secondary coil is connected between the two ends A and C of the bridge. The load resistance  $R_L$  is connected between the other two ends B and D of the bridge.

During the positive half cycle of input A.C. voltage the end M of the secondary coil becomes positive and the end N becomes negative. The diodes  $D_1$  and  $D_2$  are forward biased but the diodes  $D_3$  and  $D_4$  are reverse biased. Hence the diodes  $D_1$  &  $D_2$  conduct but the diodes  $D_3$  and  $D_4$  do not conduct. The current flows through  $R_L$  along A to B DC direction.

During the negative half cycle of input A.C. voltage the end M of the secondary coil becomes negative and the end N becomes positive. The diodes  $D_3$  &  $D_4$  are forward but the diodes  $D_1$  &  $D_2$  are reverse biased. Hence the diodes  $D_3$  &  $D_4$  conduct but the diodes  $D_1$  &  $D_2$  do not conduct. The current flows through  $R_L$  along C to D direction.

It is seen that the current flows through  $R_L$  in same direction for both the positive half and negative half cycle of input A.C. voltage. Therefore D.C. output is obtained across the load resistance  $R_L$ .

The waveforms for input AC voltage and output DC voltage for a bridge full wave rectifier are shown in fig.

Drift velocity and electron mobility how are they related?

The free electrons and holes of a semiconductor are in a state of random motion due to the variation in thermal energies when an electric field is applied the charges acquire drift under the influence of electric field.

The current density due to drift velocity of free electrons is given by

(2)  $J_n = n q v_d$  where  $n$  is the charge of a free electron,  $q$  is the free electron density and  $v_d$  is the drift velocity of free electrons.

The current density due to drift velocity of holes is given by

$J_p = p q v_d$  where  $p$  is the charge of a hole,  $q$  is the hole density,  $v_d$  is the drift velocity of holes. The total current density due to both free electrons and holes is

$$J = J_n + J_p \quad (3)$$

$J$  is directly proportional to  $J_n$

$$J = J_n + J_p$$

$$J = J_n (1 + \frac{J_p}{J_n}) \quad (4)$$

The conductivity of the semiconductor is defined as the current density per unit electric field.

It is given by

$$\sigma = \frac{1}{\rho} \quad \text{--- (1)}$$

where  $\rho$  is the resistivity.

Putting the value of  $\rho$  from eq (1) we get

$$\sigma = \frac{e(n_e + n_h)}{m_e v_d + m_h v_d}$$

$$\sigma = \frac{e(n_e + n_h)}{v_d(m_e + m_h)} \quad \text{--- (2)}$$

charge mobility is defined as the drift velocity per unit electric field.

It is given by

where  $v_d$  is the drift velocity of charge carrier  
and electric field is

$$E = \frac{V}{L} \quad \text{--- (3)}$$

Substituting eq (3) in eq (2)

$$\sigma = \frac{e(n_e + n_h)L}{v_d(m_e + m_h)L} \quad \text{--- (4)}$$

using eq (4) we get

$$\sigma = \frac{e(n_e + n_h)}{m_e v_d + m_h v_d} \quad \text{--- (5)}$$

∴ where mobility factor and is the value of field

Ans

mobility factor is a measure of how well a charged particle moves through a material under the influence of an electric field. It is defined as the drift velocity per unit electric field.

It is given by  $\mu = \frac{v_d}{E}$

where  $v_d$  is the drift velocity and  $E$  is the electric field.

Sub-Quantum Numbers

14/15

① State Pauli's exclusion principle  
 No two electrons in an atom can exist in the same quantum state, each electron must have different set of quantum numbers. This was led to the exclusion principle by a study of atomic spectra.

② Define spin orbit coupling.  
 The splitting due to an interaction between the magnetic moment due to the spin and orbital motion of electrons called spin orbit coupling.

③ What is well potential wave function -  
 A well behaved wave function must follow certain conditions.  
 → It must be continuous and finite value  
 → It must be single valued  
 → It must be normalized which means if exist in a region  $x_1$  to  $x_2$

④

$$\int_{x_1}^{x_2} \psi^2 dx = 1$$

(4) State what coherent operators.

Ans. An operator is a rule or an instruction which transforms a function into another function.

An operator tells us what operation to carry out on the quantity that follows it.

(5)

$$\begin{aligned} \hat{p} &= -i\hbar \frac{\partial}{\partial x} \\ \hat{E} &= i\hbar \frac{\partial}{\partial t} \\ \hat{H} &= \frac{\hat{p}^2}{2m} + V(x) \end{aligned}$$

(6) Show that  $[\hat{p}, \hat{H}] = i\hbar \frac{\partial V}{\partial x}$

$$\begin{aligned} [\hat{p}, \hat{H}] &= [\hat{p}, \frac{\hat{p}^2}{2m} + V(x)] \\ &= [\hat{p}, \frac{\hat{p}^2}{2m}] + [\hat{p}, V(x)] \\ &= \frac{1}{2m} [\hat{p}, \hat{p}^2] + [\hat{p}, V(x)] \\ &= \frac{1}{2m} (\hat{p}^2 \hat{p} - \hat{p} \hat{p}^2) + [\hat{p}, V(x)] \\ &= \frac{1}{2m} (\hat{p}^3 - \hat{p}^3) + [\hat{p}, V(x)] \\ &= 0 + [\hat{p}, V(x)] \\ &= [\hat{p}, V(x)] = i\hbar \frac{\partial V}{\partial x} \end{aligned}$$

(7) Explain stationary state.

We know that the wave function and the corresponding probability density for such a function is independent of time. Such a stationary state.

(8) Explain quantum effect.

In an internal system, the energy is quantized. It is given by  $E = n^2 E_1$  where  $E_1$  is the ground state energy.

(9) Also the potential energy is given as

$$U(x) = \begin{cases} 0 & \text{for } 0 < x < a \\ \infty & \text{for } x < 0 \text{ or } x > a \end{cases}$$

Exercises

Ex-10

Define the following terms:  
1. Demand  
2. Supply  
3. Equilibrium

(1) Demand

Definition of Demand:

The aggregate willingness of a consumer to purchase a certain quantity of a commodity at a certain price is called demand. It is derived from the following factors:

(2)

The aggregate willingness of a consumer to purchase a certain quantity of a commodity at a certain price is called demand. It is derived from the following factors:

(3)

The aggregate willingness of a consumer to purchase a certain quantity of a commodity at a certain price is called demand. It is derived from the following factors:

(4)

The aggregate willingness of a consumer to purchase a certain quantity of a commodity at a certain price is called demand. It is derived from the following factors:

(5)

The aggregate willingness of a consumer to purchase a certain quantity of a commodity at a certain price is called demand. It is derived from the following factors:

Q1) Number of atoms per unit cell (N):

$$N = 1 + \frac{8}{8} + \frac{6}{2} = 4$$

Q2) Reciprocal lattice

The reciprocal lattice points in three dimensional space form a reciprocal lattice space. This reciprocal lattice space is called k-space.

Q3) Why reciprocal lattice is named?

Ans

Because the length assigned to each reciprocal representing the reciprocal lattice is proportional to the magnitude of the inter plane spacing of that plane in ordinary space.

Q4) The total no. of atoms per unit cell of diamond is 8.

Q5)

1/12/19

DEG 1

Physics (Mechanics)  
 Self-learned dynamics  
 Newton's second law  
 1D and 2D simple cases

1) If  $F = F_y + F_x + F_z$  is a constant

the conservation form  $\nabla \cdot F = 0$

$$= (\nabla \cdot F) = \begin{vmatrix} \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ F_x & F_y & F_z \end{vmatrix} = \begin{vmatrix} \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ F_x & F_y & F_z \end{vmatrix}$$

2)  $(\nabla \cdot F) = 0 \Rightarrow \left[ \frac{\partial}{\partial x}(F_x) + \frac{\partial}{\partial y}(F_y) + \frac{\partial}{\partial z}(F_z) \right] = 0$

$(\nabla \cdot F) = 0 \Rightarrow F_x(x) + F_y(y) + F_z(z) = 0$   
 $\Rightarrow C_1 x + C_2 y + C_3 z = 0$  (conservation)

3) Using the relativistic energy relation that  $E^2 = p^2 c^2 + m^2 c^4$

the momentum  $p = mv$  is given by

$p = mv$   $m^2 c^4$

$E = \gamma m_0 c^2$

$\gamma = \frac{1}{\sqrt{1 - v^2/c^2}}$

Also we have  $E = \gamma m_0 c^2$

$\therefore p = \gamma m_0 v$

Substituting eqn 1 and 2 into eqn 3

$E^2 = p^2 c^2 + m^2 c^4$

$(\gamma m_0 c^2)^2 = (\gamma m_0 v)^2 c^2 + m_0^2 c^4$

$c^2 = v^2 + m^2 c^4$

$E^2 = p^2 c^2 + m^2 c^4$

Check if it is important relation to show  
 conservation of relativistic energy

## ⑤ Space-time

in a spacetime frame the two continuities of simultaneity cannot be interchanged without changing the velocity

⑥ If  $A$  &  $B$  are two consecutive instants of some event  $A$  or  $B$  in the constant motion of some point then  $A$  &  $B$  are simultaneous.

⑦ Space-time is a flat

like the space or time of a geometry of geometry described by a metric tensor field.

⑧ Motion between the course of a chronic world line is called proper time.

⑨ What is the old calculus in special theory of relativity or by Einstein?

⑩ Special relativity is

the law of physics in which

in all the inertial frames of reference

the physical relations remain valid

the laws of physics are known at the present of relativity.

⑪ If the two bodies should move towards a red light (source) to find its frequency  $\nu$  is  $\nu_0 \sqrt{\frac{1-v/c}{1+v/c}}$

⑫  $\nu = \nu_0 \sqrt{\frac{1-v/c}{1+v/c}}$

⑬ Length contraction is represented

⑭ as given by  $L = L_0 \sqrt{\frac{1-v/c}{1+v/c}}$

⑮ Time dilation is represented as

$\Delta t = \Delta t_0 \sqrt{\frac{1+v/c}{1-v/c}}$

Ques 10

# DSE-2

## Physics Revision Nucleon Number Defect

→ 2 mark question (10)

10

Sub structure and particle physics

① What is nucleon charge? (1)

→ change in the number of protons for positive controlled as it change in each proton

is  $+1.6 \times 10^{-19} C$  which is equal in magnitude to the charge of an electron

② What is radioactivity? (1)

→ the phenomenon of unstable atoms emitting ionising radiation (alpha, beta, gamma rays) as a result of a nuclear transition of an excited nucleus

③ What does group mean in a range? (1)

→ group number of a range  
① It is the number of particles emitted in a particular range consisting of 2 protons and 2 neutrons

② Being charged particles, alpha rays are deflected by electric and magnetic fields

④ Define unit of activity? (2)

→ the unit of activity of a substance which is equal to 1 Bq and 1 Becquerel (Bq)

1 curie =  $3.7 \times 10^{10}$  Becquerel (Bq)  
1 Rutherford =  $10^6$  Becquerel (Bq)  
Relation between activity and  
1 curie =  $3.7 \times 10^4$  Rutherford (Rd)

Q. What is mean life of  $\alpha$  (2)

Mean life or average life of a radioactive substance is defined as the ratio of sum life time of all the radioactive atoms to the total number of the such atoms present.

Ans: 
$$\text{Mean life } (\tau) = \frac{\text{Total life-time of all isotopes}}{\text{total number of atoms}}$$

Q. What is  $\beta$ -decay? (2)

Ans:  $\beta$ -decay is a spontaneous process in which total number of nucleons remains unchanged but the atomic number changes by unity.

Q. Explain  $\alpha$ -capture reaction or  $(\alpha, n)$  reaction? (2)

Ans: In this process an  $\alpha$ -particle from the core of the atom is captured by the nucleus & forms a new nucleus and neutron.

In this case  $\alpha$ -particle is by itself which converted into a neutron and a proton by capturing an orbital electron. It can be represented

the general equation is:

## Simplex Test

Notes - Simplex method

class - set of your (MS) test

Ref - 100

Book - Mathematics (part 2)

2)

a) Solve the equation  $y^2 - 2y = 0$

Ans  $\rightarrow y^2 - 2y = 0$

$$\left| \frac{y^2}{y} \right| = \left| \frac{2y}{y} \right|$$

Q  $y = 0$  or  $y = 2$

Q  $y = 0$  - when a row is arranged around  $y = 0$ .

b) Solve  $\frac{dy}{dx} = \frac{y}{x}$

Ans  $\rightarrow \frac{dy}{dx} = \frac{y}{x}$  - separate the variables.

Now, integrating on both

$$\int \frac{dy}{y} = \int \frac{dx}{x}$$

$$\ln y = \ln x + C$$

Q  $\ln y = \ln x + C$

$\rightarrow \ln y = \ln x + C$  - it is the required general solution.

$$E) \frac{dy}{dx} = \frac{y+1}{x+1} \quad \text{Subst } u$$

Ans  $\rightarrow$  Separating the variables, and integrating we obtain

$$\int \frac{dy}{y+1} = \int \frac{dx}{x+1}$$

$$\text{or } \ln(y+1) = \ln(x+1) + \ln c$$

where  $\ln c$  is the arbitrary constant of integration.

$$F) \text{ Ans. } y+1 = c(x+1)$$

which is the required general solution.

4) Find solution of general differential equation with constant coefficient by general method.

Any general method, let  $y = e^{(D-a)x} F(x)$   
operating it by  $(D-a)$ , we get

$$(D-a)y = F(x)$$

$$G) \Rightarrow \frac{dy}{dx} - ay = F(x) \quad \dots \dots \dots (1)$$

This is linear differential equation having integrating

factor  $e^{-ax} = e^{\int -a dx}$ . Hence solution of (1) is given by,

$$ye^{ax} = \int F(x)e^{ax} dx$$

$$\Rightarrow y = e^{-ax} \int F(x)e^{ax} dx \quad \dots \dots \dots (2)$$

$$\Rightarrow \text{Given the D.E. } \frac{d^2 y}{dx^2} - 2 \frac{dy}{dx} + 2y = 0$$

Let's solve equation by the method of

$$(D^2 - 2D + 2)y = 0$$

then auxiliary equation will be

$$m^2 - 2m + 2 = 0$$

$$\Rightarrow m^2 - 2m + 1 + 1 = 0$$

$$\Rightarrow (m-1)^2 + 1 = 0$$

$$\Rightarrow m = 1 \pm i$$

Hence the required solution is  $y = e^{(1+i)x} + e^{(1-i)x}$

$$\Rightarrow \text{Show that } \lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$$

$$\text{Ans: } \lim_{x \rightarrow 0} \left( \frac{\sin x}{x} \right) = \lim_{x \rightarrow 0} \frac{\cos x}{1} \cdot \frac{\sin x}{x}$$

$$= \lim_{x \rightarrow 0} \left( \frac{\cos x}{1} \right) \cdot \lim_{x \rightarrow 0} \frac{\sin x}{x}$$

$$= 1 \cdot \frac{1}{1} = 1 \quad \left[ \lim_{x \rightarrow 0} \cos x = 1, \lim_{x \rightarrow 0} \frac{\sin x}{x} = 1 \right]$$

$$\Rightarrow \text{Find } \lim_{x \rightarrow 0} \frac{x^2 + 2x}{x}$$

$$\text{Ans: } \lim_{x \rightarrow 0} \frac{x^2 + 2x}{x} = \lim_{x \rightarrow 0} \frac{x(x+2)}{x}$$

$$= \lim_{x \rightarrow 0} (x+2) = 2$$

## 1) Poisson's Ratio

It is the ratio of lateral contraction to the longitudinal extension of a material. If a material has a Poisson's ratio of 0.3, it means that for every 1% increase in length, the material will contract 0.3% in width.

## 2) Poisson's Ratio and Poisson's Ratio

Ans - Poisson's ratio is defined as the ratio of lateral contraction to the longitudinal extension.

→ The ratio of lateral contraction to longitudinal extension.

## 3) Bulk Modulus (K)

Ans - The bulk modulus of a substance is a measure of its resistance to compression. It is defined as the ratio of the infinitesimal pressure increase to the resulting relative decrease in volume.

$$K = -V \frac{dP}{dV}$$

# 13) Surface Tension, Viscosity and Linear Strain

## Volume Strain :-

Volume strain is defined as ratio of change in volume of the original volume as a result of the hydraulic stress.

## Linear Strain :-

Linear strain is defined as the ratio of change in length of the body due to its deformation to the original length in the direction of the force.

→ Surface tension exists in all wet and denaturing. Area → surface tension is the tendency of liquid surfaces to act as if they were under tension. It is the force per unit length acting along the surface area.

→ SI unit of surface tension is  $N/m$  (Newtons per meter)

→ Dimension of surface tension is  $T = [ML^{-1}T^{-2}] = (L^{-1})$

→ Viscosity is a coefficient of viscosity, which is the ratio of shear stress to shear rate.

Area → the coefficient of viscosity is a measure of resistance to flow of the fluid.

→ The unit of coefficient of viscosity is dynes/cm<sup>2</sup>

→ Dimensional formula of viscosity is  $[ML^{-1}T^{-1}]$

7) What is Cantilever?

Ans - A cantilever is a rigid structural element that extends horizontally and is supported at only one end.

Question

Answer

- Q. 1. What is the meaning of 'State'?
- Q. 2. Explain the concept of 'Sovereignty'.

Answer

- Q. 1. State is a political entity which is sovereign and has the authority to govern a territory.
- Q. 2. Sovereignty is the supreme power or authority which is not subject to any other power or authority.

Q. 3. What is the meaning of 'Federalism'?

Q. 4. Explain the concept of 'Federalism'.

Answer

Answer

Q. 3. Federalism is a system of government in which power is divided between a central authority and constituent political units (states or provinces). It is a form of government in which the powers are shared between a central authority and constituent political units (states or provinces). It is a form of government in which the powers are shared between a central authority and constituent political units (states or provinces).

Q1. Answer

Q1. "The state is a legal entity"

Q2. "The state is a political entity"

3 marks

Q3. Define state

Q4. "The state is a legal entity"

Q5. "The state is a political entity"

3 marks

Q6. "The state is a legal entity"

4 marks

Q7. "The state is a legal entity" and "The state is a political entity" are two different views of the state. Explain the difference between them. (4 marks)

The state is a legal entity, which means that it is a subject of international law. It has the capacity to enter into treaties and other international agreements. The state is also a political entity, which means that it is a subject of domestic law. It has the power to make laws and enforce them within its territory. The difference between the two views is that the legal view focuses on the state's external relations, while the political view focuses on its internal relations.

8) सामाजिक उत्तरदायित्व :- सामाजिक उत्तरदायित्व का अर्थ है कि एक व्यक्ति या संगठन को अपने समाज के प्रति होने वाले कर्तव्य और जवाबदारी को मानना और उसे निभाना।

9) सामाजिक उत्तरदायित्व के स्तरीकरण :- सामाजिक उत्तरदायित्व को अलग-अलग स्तरों पर बांटा जा सकता है। ये स्तर हैं - व्यक्तिगत स्तर, संगठनात्मक स्तर, सामाजिक स्तर और वैश्व स्तर।

10) सामाजिक उत्तरदायित्व के स्तरीकरण :- सामाजिक उत्तरदायित्व को अलग-अलग स्तरों पर बांटा जा सकता है। ये स्तर हैं - व्यक्तिगत स्तर, संगठनात्मक स्तर, सामाजिक स्तर और वैश्व स्तर।

11) सामाजिक उत्तरदायित्व के स्तरीकरण :- सामाजिक उत्तरदायित्व को अलग-अलग स्तरों पर बांटा जा सकता है। ये स्तर हैं - व्यक्तिगत स्तर, संगठनात्मक स्तर, सामाजिक स्तर और वैश्व स्तर।

12) सामाजिक उत्तरदायित्व के स्तरीकरण :- सामाजिक उत्तरदायित्व को अलग-अलग स्तरों पर बांटा जा सकता है। ये स्तर हैं - व्यक्तिगत स्तर, संगठनात्मक स्तर, सामाजिक स्तर और वैश्व स्तर।

4

सामाजिक उत्तरदायित्व के स्तरीकरण

RNA Helicase

Reverse Transcriptase

RNA Priming

RNA priming means by which the synthesis of RNA strand is initiated. The RNA strand provides 3' hydroxyl group to which incomplete nucleotides are added.

RNA primer is catalyzed by an enzyme called primase. The resulting RNA is extremely from a position at some point of the synthesized DNA.

At the same time the removal of RNA is replaced with DNA.

The process of removal of RNA and replaced with DNA is continuous in lagging strand in association with Okazaki fragment synthesis.

Structure of Globulin RNA

The molecule of Globulin RNA is

of 2-8 ribosomes forming polychosomes, at least  
 11 eukaryotic translation factors join with  
 the polychosome. The 80S Centriole  
 is followed by a 4-7 and 8 ribosomes. The  
 The source from which the protein is formed  
 called tubulin monomer.

 etc.

3. They have  
 nucleus and  
 cytoskeleton  
 organelles like  
 mitochondria,  
 Golgi body and  
 endoplasmic reticulum  
 and golgi

→ Transcription and translation is continuous

→ Transcription and translation is discontinuous

Ribosome

→ Ribosome is 80S type (80S + 80S)

→ Ribosome is 80S type (60S + 40S)

Factor (Release)

→ RF<sub>1</sub>, RF<sub>2</sub>

→ eRF

→ The code is polygenic <sup>many</sup> i.e. it having many start point that make several type of corresponding protein.

→ The code is mono-<sup>one</sup> i.e. it having only one start point that make only one type of protein.

tRNA

→ The initiator tRNA is <sup>Met</sup> tRNA - formyl-methionine tRNA

→ The initiator tRNA is <sup>Met</sup> tRNA only methionine tRNA

Amino acid

→ The first amino acid of the chain is <sup>Met</sup> formylmethionine

→ The initiator amino acid of the chain is methionine

## Factor (initiation)

- The initiation factors are  $IF_1, IF_2, IF_3$  which helps in translation of prokaryotes
- The initiation factors are many but 4 are dependent and  $eIF_1, eIF_2, eIF_3, eIF4A, 4B, eIF4C, 4D, eIF4G, eIF6, eIF8$  which helps for initiation in eukaryotes.

## Capping

→ Cap dependent

→ Cap independent

## Life period

→ The mRNA which produces proteins has very short half life period i.e. 5 minute (2-5 minute)

→ The mRNA which produces proteins have very long life period i.e. hours to days.

## Initiation Code

→ The coding dictionary may be slightly different the codons is encoded by  $900$  and  $400$  may not be needed.

→ The coding dictionary is normal i.e.  $400$ .

→ The transposon element was first identified in Corn

→ Barbara Mc clintock first identified them

During culture, experiment of fuse a lot of human cell of two more times differ in morphology and karyotype.

Under the influence of chemical agents, human fibroblast cell and mouse fibroblast cell fusion together in culture will fuse to form hybrid cells in which the nuclei fuse because the cell machinery is primarily mouse. These chromosomes include human chromosomes and gradually lost eventually a number of colony is formed. The human chromosomes which are identifiable these cell lines can be used for the presence of various human biochemical markers which are then assigned to the retained chromosomes.

3) Bone marrow & Thymus

4) In H.A. I chain of antibody

5)

6) Rheumatoid Arthritis Rheumatoid Arthritis

7) Arthritis is a chronic, systemic disease. Causes inflammation. Swelling and pain in and around the joint and can affect other body organs.

It usually affects the hands and feet first.

8) but it can occur in any joint. It usually involves the same joints on both sides of the body.

Symptoms  
Arthritis

- pain or stiffness in more than one joint.
- Stiffness in more than one joint.
- Swelling in more than one joint.

- 3) Functional joint involvement
- 3) Low grade fever
- 3) Appetite low
- 3) Weight loss
- 3) Weakness
- 3) Joint deformity

Treatment

Corticosteroids reduce pain and inflammation and may help slow joint damage - but they cannot cure RA.

4) Indirect ELISA  
 min + max

The procedure is directed towards the detection of antigen in this method, the antibody is immobilized on a microtiter well. The antibody reacts to an antigen containing sample. The quest to washing the well a second time

linked antibody. Specific for an antigen to react with the bound antigen the colored reaction is measured following washing of any free second antibody.

5) Structure and function of different types of immunoglobulin  
 min + max

- 3) The five primary classes of immunoglobulins are IgG, IgM, IgA, IgD and IgE. These are distinguished by the type of heavy chain found in the molecule. IgM molecules have heavy chains known as gamma chains. IgG has mu chains; IgA has alpha chains; IgE has epsilon chains; and IgD has delta chains.

Structure of IgG

- 4) Y-shaped of 4 folded polypeptide chains. 2 and 2 chains are linked together by disulfide bond.
- 5) Each domain consist of 10 amino acids.

Function

- 6) Maternal IgG (except subclass IgG2) is only immunoglobulin that can cross the placental barrier and enter the fetal circulation. Maternal IgG in circulation also can cross the interface of newborn and after passively immunity to the newborn during the first few months of life.
- 7) IgG molecule involved in the opsonization process.
- 8) IgG molecule is type 1 and type 2 hypersensitivity.

Structure of IgA

- 9) IgA is a glycoprotein with two polypeptide chains structure.
- 10) 2 light chain and 2 heavy chain. The section IgA has more amount of IgA than IgG.

Function

- 11) The major IgA provides an important line of defense against microbial invaders at mucosal surfaces. These

IgG is referred to as "universal" protein as antibodies of most of various antibodies

provide passive immunity to new born

The IgG can activate the alternative complement pathway

Structure of IgG

The secondary IgG is a polymer of four monomers but of IgG that are held together by disulfide bonds between one of their heavy chains - heavy chain

Function

IgG is the first immunoglobulin class effectively activate the complement system

The presence of IgG is faster on various microbes

IgG exhibits other biological properties like opsonin, agglutination, cytotoxicity

Structure of IgM

The IgM is a Y-shaped glycoprotein with five polypeptide chains structure

2 light chains and 5 heavy chains (4S) in the H chain has 5 constant whole

Function

antigen processing  
resistant to proteolytic degradation  
helps in cytotoxic and chemotaxis

Immunoglobulin structure of IgE

The structure of IgE is similar to that of IgG and IgD but with an extra C<sub>H2</sub> domain and without any hinge region

Function

It reacts mainly against helminth worms and protozoan parasites  
It plays important role in causing type 1 hypersensitive reaction and enhancing acute inflammation

2) Summation in physiology, the additive effect of several electrical impulses on a neuromuscular junction between a nerve cell and a muscle cell. Individually the stimuli cannot evoke a response but collectively they can generate a response.

Summation is the process of adding things up. In the case of nervous system, it is about adding up the effect of multiple stimuli that are all individually subthreshold. So that together they are suprathreshold and are able to generate an action potential.

3) Taxes  
Taxes are those orienting movements which

Ocean with reference to the direction of stimuli  
In the type of orienting mechanism, the spectral  
of stimuli is of about importance interesting  
Experiments have been carried out with amphipods  
Called Beach fleas, it has been observed that  
If these fleas are removed away from  
the shore to a dry spot, they head straight back  
to water. These fleas were placed in closed  
glass tubes and kept away from sea on  
dry beach. It was noted that fleas always  
gathered in that part of the glass tube which  
was closest to sea. It has been established  
that along with inaction it was also  
the position of the animal was influenced by  
fleas to orient themselves towards sea.  
There are a variety of cases depending upon  
the relationship of stimuli and the receptors.

(3)

Humans can exhibit all these types of  
oriental all three types of imprinting: filial,  
Sexual, and imbro-filial imprinting like  
humans to find stimulus yet different  
enough make to their parents.

Imprinting is a distinctive psychology  
It is inherited trait that some animal  
act as a means of survival imprint is defined  
as a behavioural trait that altricial ani-  
mal experience have after being born  
where they develop an extremely close  
bond with the animal they first meet.

usually their parents.

## Types

### 1. Filial imprinting

It is the most widely known type of imprinting that influences the connection between young and their parents or siblings. This type of behavioural bond allows the young to visually imprint on their parents as a means of survival. This unique bond also ensures that the young will recognise their parent or even different members within their species which is useful for reproduction.

### 2. Sexual imprinting

Sexual imprinting is a type of behavioural bond that affects an animal's inclination towards a sexual mate from learned behaviour, usually very early in life. This

type of imprinting behaviour influences mate selection later in life, it can be altered to make an animal prone to characteristics or characteristics specific features, psychologists are exploring whether imprinting is a factor in human mate choice.

3. Sibling imprinting: filial and sexual imprinting may also involve sibling imprinting.

Q1) Larval form of Hemichordates: Larvaria

↳ Catadromous migration refers to movement of fish sea water to fresh water.

↳ The protozoan larva is called Amphicoelate.

Q2) Anadromous migration:

↳ When migration occurs from sea to fresh water for spawning, it is called anadromous migration.

↳ Adults of anadromous fishes live and feed in ocean waters but their spawning grounds lie in the tributaries of rivers.

↳ Salmon, bluegills, Hilsa and lampreys are some of the marine fishes that undertake anadromous migration to spawn in rivers.

↳ ex: Atlantic salmon, Hilsa shad, Toli shad, Salmon, flat head sillago, sturgeon, paradise fish.

↳ Respiratory organ in fishes:

## \* General character of amphibians:

- 1) Amphibians are cold blooded vertebrates and most of them undergo hibernation during winter and aestivation during summer.
- 2) They may be aquatic, terrestrial or both.
- 3) The body is divisible into head, neck, trunk & tail.
- 4) Skin is thin, moist and glandular. Skin acts as a respiratory organ.
- 5) Amphibians show two pairs of limbs by which they can swim in water and jump or walk on the land.
- 6) The limbs if present are supported by girdles.
- 7) Exoskeleton is absent.
- 8) A pair of nostrils which open into buccal cavity.
- 9) Respiration by skin, gills or lungs.
- 10) Heart is dicardiac. Ribs are absent.
- 11) Digestive system is well developed.
- 12) Alimentary canal opens into cloaca.
- 13) Heart is 3 chambered with 2 auricles and 1 ventricle.
- 14) Eyes are provided with movable eyelids.
- 15) well defined sexual dimorphism.
- 16) Fertilization is generally external, but sometimes internal.
- 17) Eggs are mesolecithal & covered by jelly covering.
- 18) Cleavage is holoblastic & unequal.
- 19) Sexes are separate.
- 20) Development is indirect.

## → Respiratory organ in fishes

Fishes mainly depends on pharyngeal gills for aquatic respiration, however other also occurs to supplement gill respiration.

### → Buccal pharyngeal epithelium

- In fishes the epithelium lining of buccal cavity & pharynx is usually highly vascular and permeable to gases in water.
- But the Symbonchus and the mud skipper can fill their oral and pharyngeal cavity with air & thus take  $O_2$  directly from atmosphere.

### → Pericardial

- In amiebat, lung fish, lepidosiren during breeding time, the pericardial male becomes enlarged and grow filamentous vascular outgrowths which provided fresh  $O_2$  to the guarded eggs.

Q1) Sarcomere is a unit of muscle fibre.

Q2) The cell of a bone is known as osteoblasts.

Q3) Actin form a thyroid form thyrocytes.

Q4) Ultrastructural appearance of skeletal muscle

The striated appearance of skeletal muscle fibres is due to the organization of 2 contractile proteins - actin and myosin.

The functional unit of contraction in a skeletal muscle fibre is the sarcomere, which runs from Z line to Z line. A sarcomere is broken down into a number of sections.

Z line - where the actin filaments are anchored.

M line - where the myosin filaments are anchored.

I band - The length of myosin filament may contain only overlapping actin filament.

A band - The length of myosin filament may contain actin filament.

H zone - contain only myosin filament.

### 5) Molecular and chemical basis of muscle contraction

Muscle contraction by the integration of protein filaments are made up of myosin and actin molecules. The head part of each myosin & actin molecule is thought to interact with the actin filaments in a cyclic manner driven by ATP hydrolysis with each stroke of the cycle causing about 10 nm of movement.

Contractile protein

In resting state the muscle fibres remain relaxed because the actin and myosin don't form actomyosin ATP complex as they carry similar electric charge. The calcium ion concentration is maintained in the sarcoplasmic reticulum.

#### STEP 1: Depolarisation of Sarcolemma

When a nerve impulse arrives at the junction of nerve ending in the muscle the sarcolemma of that muscle fibre is depolarised.

physical change

### Step 2: Release of $Ca^{2+}$ ion

The depolarisation of sarcolemma is transmitted to the sarcoplasmic reticulum and causes release of  $Ca^{2+}$  ion from sarcoplasmic reticulum.

### Step 3: Conformational change in actin:

The released  $Ca^{2+}$  ion binds to  $T, C$  subunit of troponin. This produces conformational change in troponin & then in actin filament, preparing it to contact with myosin.

### Step 4: Formation of cross-bridge complex:

The cross bridge of myosin binds to a globular subunit of the actin filament. Actin-myosin-myosin-ATP are which causes release of energy from ATP required for the movement of myosin cross bridge.

### Step 5: Breaks of actin-myosin bridge:

ATP binds to myosin bridge breaking the actin-myosin bridge and to allow the movement of cross-bridge leading to the sliding of thick & thin filaments past each other.

## Relaxation:

With the release of nervous excitation the sarcolemma develops electric potential and the sarcoplasmic reticulum releases  $Ca^{++}$  ions from the sarcoplasm. With the decline of  $Ca^{++}$  ions myosin-ATPase activity is inhibited, the cross-bridges are broken and troponin releases  $Ca^{++}$  ions leading to the recovery of resting state.
